Mormon Wall St couple flew to Canada up 21 in record trading

By MARTIN DICKSON, SALISBURY, April 17
Joyce McKinney, 27, and Keith May, 24, her co-defendant in the Mormon kidnap case, flew to Canada from the Irish Republic's Shannon airport last Wednesday, travelling under assumed names and posing as deaf mutes, it was learned yesterday.

But it was only on Saturday that an alert was given for the pair who had last reported on Wednesday morning to London's West Hendon police under their bail condition.

Members of the Air Canada crew identified the couple for police. They had apparently arrived at Shannon three hours earlier on a British Airways flight.

Israel planning more settlements

Mr. Mordechai Zippori, Israeli Deputy Defence Minister, said yesterday that more Jewish settlements would be established in the occupied West Bank of the Jordan with Government support. This had been made clear to the U.S. and Egypt. Meanwhile, Dr. Kurt Waldheim, UN secretary-general, endeavoured to persuade Israel to speed-up troop withdrawals from southern Lebanon. Middle East, Page 3

Parties close ranks on More

As the search for Sig. Aldo More, the kidnapped former Italian Premier, was extended to the Mediterranean island of Elba, Italian parties closed ranks and agreed there could be no political deals with "terrorists." At the Turin trial of 15 urban guerrilla leaders, the founder of Italy's Red Brigades shouted that the death sentence on More was a condemnation of the nation's ruling class. Page 2.

Enlarging EEC
The Common Market should not prevaricate over negotiations for the entry of Greece, Spain and Portugal, even though enlargement will require a host of changes in the Committee's political, economic and institutional make-up, a Lord Select Committee on the European Communities reports. Page 8

Neutron claims

France is working on plans to develop and build a neutron bomb. French officials said in Paris, adding that a decision on production was still a long way off. Mr. Harold Brown, U.S. Defence Secretary, claimed that NATO members supported President Carter's decision to defer production of the bomb. Page 2

Schmidt visit

Chancellor Helmut Schmidt of West Germany is to visit Britain for talks with Mr. James Callaghan, Prime Minister, on Sunday and Monday. He will be accompanied by Dr. Hans-Dietrich Genscher, Foreign Minister and other Ministers. Page 2

Exit smallpox

No smallpox cases have been reported anywhere in the world this year. Dr. H. H. Meher, director-general of the World Health Organisation, said in Nairobi.

Briefly...

The BBC is to consider switching the broadcasting of Parliament from Medium Wave to VHF because of public reaction.

Mr. Hugh Archibald Campbell, a security officer of Banbury, Oxfordshire, was remanded in custody for seven days at Banbury charged with the theft of £103,514 from Securicor.

Los Angeles police arrested a man alleged to have threatened to kill President Carter and group's staff association. Back Governor Brown of California. Page 2

Smith 'doubtful' about merits of all-party meeting

By MARTIN DICKSON, SALISBURY, April 17

Mr. Ian Smith said to-night that he "doubted" if his day-long talks with Dr. David Owen, the British Foreign Secretary, and Mr. Cyrus Vance, the U.S. Secretary of State, had convinced Rhodesia's governing Executive Council that there would be any benefit in holding an all-party Rhodesian conference.

Mr. Smith, chairman of the multiracial Council, said that the Anglo-American plan for an all-party meeting would be considered. But the Council has insisted that it will go back on the "internal settlement" agreement signed here last month by Mr. Smith and three domestic nationalist leaders.

Even if the Council decided to attend a conference, its differences with the Patriotic Front, whom Mr. Vance and Dr. Owen met at the weekend, make the chance of any agreement extremely slim.

Mr. Smith said the Council would give "mature and good consideration" to the proposal. It would be "irresponsible" to give it scant consideration.

The outcome of to-day's meeting, which Dr. Owen said had been held in a "good atmosphere," seemed to have matched Anglo-American expectations—Dr. Owen and Mr. Vance had not expected any immediate acceptance of an all-party conference and had feared an outright rejection.

They are believed to have argued that Council members would lose nothing by going to a conference and that it could be a mistake for internal leaders

to be seen turning their backs on the outside world.

They are also believed to have argued that if the guerrilla war continued and that if the Salisbury leaders wanted to promote their agreement, the Council would be unwise to refuse to participate in a conference attempting to widen areas of agreement.

The Executive Council is thought to have pressed the merits of its agreement and to have argued that the Patriotic Front is losing guerrilla followers who now believe that they have achieved their aims.

Council members are also understood to have referred disparagingly to Mr. Robert Mugabe's statement in Daras-Salam that he would like to see Rhodesia become a one-party Marxist state.

Mr. Vance told a news conference that Mr. Mugabe had not said this to him, or he would have rejected the idea.

Mr. Vance and Dr. Owen left Pretoria, the Anglo-American team appears optimistic that South Africa will encourage the Executive Council to attend the conference and that it could be a mistake for internal leaders

Further pressure on pound

By MICHAEL BLANDEN

THE POUND came under further pressure in the foreign exchange markets yesterday, and the Bank of England again stepped in to support the exchange rate.

Post-Budget uncertainty continued to affect the City markets. Gilt-edged stocks recovered after last week's sell-off, but the money markets were confused after week-end suggestions of a possible further increase in short-term interest rates.

Uncertainty

After last week's Budget rise in the Bank of England's minimum lending rate from 8½ to 9 per cent., the markets are still settling down. The uncertainty was reflected in rates on Treasury bills yesterday which, if maintained, would indicate a further rise in the M.R.

In the gilt-edged market, however, the mood improved and, after early falls, prices recovered with some good trading recorded in the long-dated stocks. These ended with gains of up to 1½ and the Financial Times Government securities index rose by 0·23 to 71·2.

\$ strong

Pressure on the pound reflected partly a continued recovery in the U.S. dollar. This followed earlier buying in the Far East markets, and the dollar remained strong even against the yen, in spite of the announcement of a record Japanese trade surplus.

The pound closed with a loss of 50 points at \$1.8515. Its trade-weighted index against a basket of currencies was unchanged at 61·7 but early in the day it had dropped to 61·8465.

The recovery of the dollar against the yen, in spite of the announcement of a record Japanese trade surplus.

The pound closed with a loss of 50 points at \$1.8515. Its trade-weighted index against a basket of currencies was unchanged at 61·7 but early in the day it had dropped to 61·8465.

"It is not our intention that there should be any increase in the Government's borrowing requirement," Mr. Lawson said.

The Lib Dems meet tomorrow for a discussion of tactics on the Finance Bill.

Some parts of the legislation will then be discussed in Standing Committees, on which the Government will have parity of numbers and effective control.

Meanwhile, Scottish Nationalists announced last night that they would also try to force the Government to cut the standard rate of income tax. The attempt will come in a SNP amendment to the Finance Bill giving effect to the Budget proposals, due to be published on Thursday.

The Nationalists also want to see reductions in the duty on whisky and in corporation tax. With rather more conviction following the growing signs of Labour's electoral revival, they repeated their warnings to the Liberals that major defeats would compel them to call a General Election.

Tories differ from Liberals over Budget

By PHILIP RAWSTORNE

POLITICAL jostling yesterday between the Tories and Liberals over their Budget tactics suggested that the Opposition may find it difficult to unite to force the Government into further substantial tax cuts.

Each party announced its intention of tabling separate amendments to the Finance Bill next month and called on the other for support.

But Sir Geoffrey Howe, Tory shadow Chancellor, said that there was a fundamental difference between the Tory and Liberal views on the Budget.

There was a "strict limit" to the size of tax cuts for which the Tories could responsibly press. "You will hear no Dutch auction from us."

Duty

Mr. John Pardoe, Liberal Economics spokesman, responded by asserting that his party did not trust the Tories on tax reductions.

In an ITN interview, he said that the Liberals were not drifting towards a pact with the Tories. Negotiations were continuing with the Government but there would be no discussions of tactics with the Tories.

Meanwhile, Scottish Nationalists announced last night that they would also try to force the Government to cut the standard rate of income tax. The attempt will come in a SNP amendment to the Finance Bill giving effect to the Budget proposals, due to be published on Thursday.

The Nationalists also want to see reductions in the duty on whisky and in corporation tax.

With rather more conviction following the growing signs of Labour's electoral revival, they repeated their warnings to the Liberals that major defeats would compel them to call a General Election.

Standard train and bus fares urged for young

CONCESSIONARY bus and train fares for children should begin at the age of five and continue until they leave school, says a report.

Fare differences in the age ranges for trains, buses and tubes are unacceptable and should be standardised, say the Greater London Council and London Transport in a joint report.

A local education authority pass to show that a child was a full-time pupil would make the scheme easy to operate. The GLC transport committee will consider the report on Thursday.

Commons procedures would prevent the Tories from seeking changes in indirect taxes. But the Government could raise £700m by restoring Value Added Tax to a 10 per cent rate.

"It is not our intention that there should be any increase in the Government's borrowing requirement," Mr. Lawson said.

The Lib Dems meet tomorrow for a discussion of tactics on the Finance Bill.

Some parts of the legislation will then be discussed in Standing Committees, on which the Government will have parity of numbers and effective control.

EEC FINANCE MINISTERS' MEETING

Doubts over growth rate

BY GUY DE JONQUIERES, COMMON MARKET CORRESPONDENT

SERIOUS DOUBTS were cast by West Germany to-day on the EEC's ability to attain its recently-agreed objective of a 4.5 per cent average growth rate by the middle of next year, even if governments were to take some additional measures to boost their economies.

At the same time, Britain made clear that it planned to take no further inflationary action before the seven-nation Western economic summit in Bonn next July, and that its policies after that would be strongly influenced by factors such as the behaviour of money supply and the balance of trade and payments.

Mr. Denis Healey, the U.K. Chancellor of the Exchequer, is expected to convey this message in person to M. François-Xavier Ortoli, the EEC Economics Commissioner, who is due to visit London later this month as part of a tour of Common Market capitals.

M. Ortoli was instructed by the EEC Finance Ministers to-day to draw up a report on the margin for further inflation available to governments of the Nine. The study is expected to be completed by May or June,

Meanwhile, the Ministers

agreed to-day on the broad outlines of the common EEC that it offers a more practical position to be taken at the next meeting of the interim committee of the International Monetary Fund (IMF) in "zone," discussed at the EEC Mexico City on April 29. The Copenhagen summit last week-end will be chaired by Mr. Healey.

The Ministers have decided to press for an increase in the interest rate payable on Special Drawing Rights (SDRs), to make them more attractive to reserve holders. The EEC wants to raise the rate from 60 per cent to 70 per cent of the average interest paid on deposits in the currencies on which the SDR is based.

But the Ministers have been limited in their support for proposals to increase SDR allocations and for the IMF's plan to establish a special "substitution account" which would permit central banks to exchange part of their dollar holdings for SDRs.

Britain has backed both proposals, but a somewhat cooler attitude has been displayed by West Germany. Although the planned substitution account would cover only part of the \$50bn. held in

official reserves, Britain believes

OVERSEAS NEWS

Boats still near Japan islands

ABOUT 140 Chinese fishing boats, some armed with machine guns, were still lying off islands claimed by Japan in the East China sea, the maritime safety agency said here today.

The boats, all of which left the 12-mile territorial limit of the Senkaku Islands yesterday, were now between 17 and 22 miles northwest of the disputed territory, the agency said.

Last Wednesday the boats entered the territorial limit of the barren and uninhabited islands, believed to have rich undersea oil reserves, causing a diplomatic row between Tokyo and Peking. The islands,

100 miles east of Taiwan, are also claimed by China and Taiwan.

The Japanese Foreign Ministry said today the boats should move away, altogether if the incident was accidental as Peking has said.

Usao Island, counsellor at the Chinese embassy in Tokyo, told the Foreign Ministry yesterday the incident was accidental and had nothing to do with a proposed peace and friendship treaty between the two countries.

Japan's Chief Cabinet Secretary, Shintaro Abe, told a Press conference here the government would not resume treaty talks with Peking unless the territorial issue of the

TOKYO April 17.

islands was solved. High-level talks on the territorial dispute would be held soon between Peking and Tokyo, he added without elaborating.

In Peking diplomatic sources said to-day that Chinese officials there had informally told a visiting Japanese parliamentary delegation that the fishing boats were merely engaged in their annual hunt for a certain species of fish.

The sources quoted Chinese Vice-Premier Keng Piao as having told the delegation on Saturday that the government in Peking had not been involved in the incident, and officials repeated this last night at a farewell banquet given by the Japanese.

Mr. Desai explains spy device

By Our Own Correspondent

NEW DELHI, April 17.

INDIA'S PRIME Minister, Mr. Moraji Desai, told Parliament here to-day that India had co-operated with the United States in the 1960s to place nuclear-powered sensors in the Himalayas to spy on China. He

confirmed that one had been lost high in the snows of Nanda Devi.

Mr. Desai said two of the electronic sensing devices had been carried into the mountains to secure information about missile development—clearly in China although he did not name that country. He said one device was lost in an avalanche on Nanda Devi, 25,645 feet, in 1965. The other was returned to the U.S. in 1968 a year after being planted on another peak near the frontier.

There has been concern in India since the publication of reports in the U.S. last week that the CIA had planted plutonium-powered monitoring devices near the headwaters of the Ganges. Mr. Desai said the Government had decided to appoint a committee of scientists to study the implications for the environment and population.

Mr. Desai sympathised with what he called "just apprehensions" about the possibilities of contamination of the waters in our sacred river." He assured the House that his Government shared the general concern.

The Prime Minister said that when a joint Indo-American expedition equipped with the device was approaching the summit in 1965, it was overtaken by a blizzard. Forced to retreat, it had left the equipment behind, securely hidden. Subsequent searches had failed to sight the device.

In 1967 a new device was taken to the same area and was installed on a neighbouring peak but was returned to the U.S. the following year.

The Congress Party Government, under Lal Bahadur Shastri and then Mrs. Indira Gandhi, had decided on the operation in the interests of the nation. It was not a clandestine CIA job.

Vance for unscheduled Cairo visit

BY ROGER MATTHEWS

Mr. Cyrus Vance, the U.S. Secretary of State, is to make an unscheduled stop at Cairo airport in the early hours of tomorrow morning in order to discuss the current state of Middle East peace efforts with Mr. Mohammed Ibrahim Kamel, Egypt's Foreign Minister.

Mr. Vance, en route to London and Moscow from southern Africa, will be having his first meeting with a top Egyptian official since President Sadat visited Washington for talks in February. Despite the failure of the Egyptian initiative to effect any significant change in Israeli policies, Mr. Sadat has again stressed in the past few days that he does not intend to abandon his efforts.

Egyptian officials stress that by giving up now they would be allowing Israel's Prime Minister, Yasir Arafat, the PLO leader, in the corner in which they believe he is trapped. But at the same time they emphasise that his mission is to speed up

that only the U.S. can bring about Israeli withdrawal from the changes in Israeli attitudes south and help the Lebanese government re-establish national authority in the region.

Mr. Sadat, as a well-seasoned campaigner in Egyptian politics, must be only too well aware that after the euphoria and excitement generated by his visit to Israel the tide of disillusion is starting to set in. Therefore Mr. Kamel can be expected to be increased to 4,000 by the end of this month. Dr. Waldheim is expected upon his return to increase pressure on Israel and to take a more positive role in achieving what is still regarded here as the possibility of a breakthrough to peace.

Mr. Kurt Waldheim, the UN Secretary General, held talks here to-day with Lebanese officials and guerrilla leaders Mr. Menahem Begin to escape in an attempt to stabilise the ceasefire in southern Lebanon.

Dr. Waldheim told reporters the same time they emphasise that his mission is to speed up

CAIRO, April 17.

The Government had been attracting criticism particularly by the U.S. for its established view that resolution 242 does not call for Israeli withdrawal on the West Bank since previous policy statements had spoken only of 242 applying to selected Arab neighbours.

By specifying that the Security Council resolution does apply to negotiations with Israel the Cabinet seemed to be hinting that there could be room for talks about the withdrawal on the West Bank without explicitly spelling this out.

The opposition Labour Party has accused the Government of trying to solve Israel's problems by playing on words.

Criticising the Government for not expressing readiness for territorial compromise on the West Bank, the Labour Party said that such gimmicks "are no substitute for a clear and credible policy."

LIFE IN CHINA

Colour and curls for girls

BY K. K. SHARMA IN PEKING

"LOOK, the girls in Peking are beginning to curl their hair," said an official while interrupting a detailed explanation of why the Chinese wear depressingly identical clothes. The girl he pointed out had bobbed hair, slightly curled at the edges, and was just slightly different from the customary short hair or small pigtails and pony tails fastened by rubber bands.

Hair styles apart, there is little that is outwardly feminine about Chinese women. Unisex has been carried to the extreme. Women wear the same blue or grey jackets and trousers sported by men, allowing no cosmetics to blemish their skin. This drab uniformity is evident universally in Peking.

Officials claim this is not regimentation. It is, they say, a tradition of the Long March when men and women wore the same uniforms to carry out their jobs more easily and this usage has remained. The same official who explained this said he had tried in vain to persuade his office colleagues to bring some colour, some sign of individualism to their clothes. His daughter, a factory worker, was married the day before and they are coquettish, betraying that least this occasion, demanded characteristics all Chinese women are not found with the couple wearing the same blue jackets and elsewhere. All of them, like trousers they wore every day (if everyone else in China, ride bicycles, (private cars are unknown), which now like

trousers they wore every day (it is possible they returned to work). Yet there are signs of femininity breaking out. This shows rush hours. Bicycles are allowed itself, curiously, in socks, to be privately owned, and are women, wear their trousers the universally accepted means about three inches above their transport. They are also in

heels and never have I seen such terms on the couple of inches of socks visible. In Shanghai, there is a little less of the uniformity although this again takes the form of a greater variety of hair-styles rather than clothes. Shanghai women are more pert

short supply and there is a long waiting list for models that went out of use in the West 20 or more years ago. A bicycle is a prized possession.

"We have three in our family" one Chinese said with the kind of pride that someone in another country might have shown over ownership of the same number of cars.

Life is hard in China but does not seem intolerably harsh. Food and clothes are rationed, though there is no shortage and both are absurdly cheap by Western standards. In fact, apart from bicycle there is no necessity, and a bicycle in China is a necessity) that appears lacking. By Third World standards the Chinese live well and it is a remarkable achievement that I saw no sign at all of the subject poverty that exists in many other countries in Asia and Africa. The State may not like the Chinese to be individuals but it has taken care of their basic needs to the extent that petty crime has been virtually eliminated. (You do not lock your hotel room anywhere in China.) Wages are low, being paid on an eight-tier system in factories which makes the minimum around 35 yuan (roughly \$20) a month and the maximum around three times as much.

Scientists and the skilled get a little more but the difference is negligible and it frequently happens that a highly trained engineer only earns around 20 yuan more than his factory manager. If wages are low, so are prices while amenities are heavily subsidised. A two bedroom flat costs just two to four yuan a month while medical services, education and other welfare services are available at a nominal fee or are fully covered by the workers' parent organisation. There must be few women in China who don't work for the same pay as men) and it is an index of the employment situation that they do. Women drive tractors in fields, dig ditches, hold key official posts, drive buses and trolleys and just about anything men do (if also in the same clothes). Most factories have more women employees than men since China's large army needs more of the latter. But no-one who wants a job goes without one.

The fact that last month's People's Congress decided on rapid modernisation as part of the "four modernisations" is a sign not only of the leadership's desire for rapid development but also that the large population (roughly 900m, but no census has ever been held) is usefully employed—again a remarkable achievement for a third world country. But so far it is just their basic needs that have been taken care of. Few shops display goods in windows (Shanghai is again an exception) but inside there is a surprising variety.

Most are mini department stores, especially those located in small towns and communes, and short of cars and heavy engineering goods almost anything is available. Shoes cost just eight yuan though variety is limited. Luxury goods are expensive and a television set costs 400 yuan, although an model said there will now come down in view of their education potential. It is easy to see that prices are fixed arbitrarily but this is also one reason for the lack of inflation; if wages are low at least they still fetch the same value in terms of goods as they did 20 years ago. How long this will continue now that China is planning to expand trade and thus be subject to world economic and price fluctuations remains to be seen.

Even though the late Chairman Mao's portraits are hung everywhere and his thoughts on every subject are inscribed wherever possible there are signs that the relative pragmatism and liberalisation announced at the fifth Congress is percolating, albeit slowly, down to the people. The Chinese must still conform and the inevitable denunciation of the "Gang of Four" that climaxes any discussion deprives credibility from what is probably a justified decision to "expose its machinations." Many officials confess that people are confused although there does not seem to have been any blood letting. Partly this is because of the unique form of Chinese punishment of merely "criticising" someone who does not criticise himself. This does not amount to denunciation officials hasten to explain, but is thought more effective than dismissal or imprisonment because keeping one's face is still important in China. But there are faint signs of liberalisation. The Chinese continue to put up posters with impunity and a recent one criticised a politburo member and was read by crowds in Peking's main square. And then one must not forget that Chinese girls are beginning to curl their hair.

There's a strong case for re-locating at KING'S LYNN

For firms...

...for families

King's Lynn offers manufacturers, importers and exporters one of the most modern docks along the East Coast with regular service to Hamburg and a cargo liner service to Greece, Cyprus and The Lebanon. Labour relations are excellent—offices and factory buildings are available, and land is waiting for you to build on.

For further details please write or telephone: Ken Faulkner, Expansion/Public Relations Officer, West Norfolk District Council, Clifton House, Queen St., King's Lynn, Norfolk. Tel: 0553 61241

Mr. Desai explains spy device

By Our Own Correspondent

NEW DELHI, April 17.

INDIA'S PRIME Minister, Mr. Moraji Desai, told Parliament here to-day that India had co-operated with the United States in the 1960s to place nuclear-powered sensors in the Himalayas to spy on China. He

confirmed that one had been lost high in the snows of Nanda Devi.

Mr. Desai said two of the electronic sensing devices had been carried into the mountains to secure information about missile development—clearly in China although he did not name that country. He said one device was lost in an avalanche on Nanda Devi, 25,645 feet, in 1965. The other was returned to the U.S. in 1968 a year after being planted on another peak near the frontier.

There has been concern in India since the publication of reports in the U.S. last week that the CIA had planted plutonium-powered monitoring devices near the headwaters of the Ganges. Mr. Desai said the Government had decided to appoint a committee of scientists to study the implications for the environment and population.

Mr. Desai sympathised with what he called "just apprehensions" about the possibilities of contamination of the waters in our sacred river." He assured the House that his Government shared the general concern.

The Prime Minister said that when a joint Indo-American expedition equipped with the device was approaching the summit in 1965, it was overtaken by a blizzard. Forced to retreat, it had left the equipment behind, securely hidden. Subsequent searches had failed to sight the device.

In 1967 a new device was taken to the same area and was installed on a neighbouring peak but was returned to the U.S. the following year.

The Congress Party Government, under Lal Bahadur Shastri and then Mrs. Indira Gandhi, had decided on the operation in the interests of the nation. It was not a clandestine CIA job.

Vance for unscheduled Cairo visit

BY ROGER MATTHEWS

Mr. Cyrus Vance, the U.S. Secretary of State, is to make an unscheduled stop at Cairo airport in the early hours of tomorrow morning in order to discuss the current state of Middle East peace efforts with Mr. Mohammed Ibrahim Kamel, Egypt's Foreign Minister.

Mr. Vance, en route to London and Moscow from southern Africa, will be having his first meeting with a top Egyptian official since President Sadat visited Washington for talks in February. Despite the failure of the Egyptian initiative to effect any significant change in Israeli policies, Mr. Sadat has again stressed in the past few days that he does not intend to abandon his efforts.

Egyptian officials stress that by giving up now they would be allowing Israel's Prime Minister, Yasir Arafat, the PLO leader, in the corner in which they believe he is trapped. But at the same time they emphasise that his mission is to speed up

that only the U.S. can bring about Israeli withdrawal from the changes in Israeli attitudes south and help the Lebanese government re-establish national authority in the region.

Mr. Sadat, as a well-seasoned campaigner in Egyptian politics, must be only too well aware that after the euphoria and excitement generated by his visit to Israel the tide of disillusion is starting to set in. Therefore Mr. Kamel can be expected to be increased to 4,000 by the end of this month. Dr. Waldheim is expected upon his return to increase pressure on Israel and to take a more positive role in achieving what is still regarded here as the possibility of a breakthrough to peace.

Mr. Kurt Waldheim, the UN Secretary General, held talks here to-day with Lebanese officials and guerrilla leaders Mr. Yasir Arafat, the PLO leader, in an attempt to stabilise the ceasefire in southern Lebanon.

Dr. Waldheim told reporters the same time they emphasise that his mission is to speed up

The Government had been attracting criticism particularly by the U.S. for its established view that resolution 242 does not call for Israeli withdrawal on the West Bank since previous policy statements had spoken only of 242 applying to selected Arab neighbours.

By specifying that the Security Council resolution does apply to negotiations with Israel the Cabinet seemed to be hinting that there could be room for talks about the withdrawal on the West Bank without explicitly spelling this out.

The opposition Labour Party has accused the Government of trying to solve Israel's problems by playing on words.

Criticising the Government for

not expressing readiness for

territorial compromise on the

West Bank, the Labour Party

said that such gimmicks "are no

substitute for a clear and

credible policy."

AMERICAN NEWS

Carter's team takes stock and seeks a new course

BY DAVID SELL

PRESIDENT CARTER, most of that the state of the economy was upset by the appointment of his Cabinet and the small group of advisers on which he relies, were to-day spending a second day at the presidential retreat in Maryland, trying to chart a new course for the increasingly delegitimized administration.

Criticism, not all of it fair, abounds on all sides and the two-day session is designed to enable the administration to "take stock" after its first 13 months. What worries the American people is inflation and here Mr. Carter seems to be facing real difficulties.

The events of the past week have served as a reminder of the confused way in which economic policy is being made. A week ago Mr. Michael Blumenthal, Treasury Secretary, was almost the last key official to be told that Mr. Robert Strauss, the influential trade representative, was to lead the administration's attack on inflation.

That led to reports that Mr. Blumenthal was irritated by the White House which was in turn irritated by him when he appeared to indicate that he had reservations about the wisdom of the size of the \$25bn. tax cut that is a priority of the administration. Mr. Blumenthal denied the reports, and denied that he

Meanwhile, the polls indicate

Senate votes to-day on canal

BY OUR OWN CORRESPONDENT

THE CONFUSED debate inside the U.S. Senate about the precise wording of the second Panama Canal Treaty continued to-day as both Democratic and Republican leaders sought to ensure passage of the treaty-in-tomorrow's critical vote.

To-morrow's vote comes after 14 years of intermittent negotiations about the canal by four administrations. The Senate defeat of the treaty would do immeasurable harm to U.S. standing in Latin America and would also be widely interpreted as a further sign that President Carter lacks the ability to get controversial foreign policy measures through the Senate.

Many observers believe that such a defeat would greatly reduce the chances of Senate approval of a new strategic arms agreement later this year, and should one be forthcoming, and it is also more than likely that it would pressurize a defeat for the President in his bid to sell aircraft both to Saudi Arabia and Egypt as well as Israel.

Sen. Robert Byrd, the Democratic leader, and Sen. Howard Baker, his Republican counterpart, said over the weekend they thought the treaty would squeak through. But Sen. Baker, echoing the Senate's profound dissatisfaction with the way in

WASHINGTON, April 17.

which the treaties have been handled, also noted that "there is such a fantastic array of discontent on this thing that I don't know how we are going to treat it finally."

The Senate leadership worked through the weekend to find a form of words that will satisfy both Sen. Dennis DeConcini, who forced the amendment of the first treaty to give the U.S. broad powers to intervene to protect the canal after the year 2000, and liberals who consider this amendment insulting to Panama and who have threatened to oppose the measure if it is included.

Sen. DeConcini is sticking to his position and said last night that at least two other Senators, who voted for the first treaty, had told him they would not vote for the second if it did not include his amendment. As the first treaty was carried by a very narrow margin, their defection might be enough to defeat the measure and, in the process, hand President Carter a crushing defeat.

The only on which the Senate voted to-morrow concerns the relationship between the U.S. and Panama between now and 2000 when the canal is finally made over to the Panamanian Government. Sen. DeConcini and

BUENOS AIRES, April 17.

one, there is no way to avoid it," he said, but assured his listeners that the "organised bands of assassins" had been disbanded. He caused considerable surprise when he said that he has no bodyguards, that he sometimes walks to Government House from his home 30 blocks away (not in uniform, of course) and that his wife goes to the supermarket alone, and that his children attend school unaccompanied.

What was new to the audience was the general's statement that "soon, very soon, almost certainly in April," the military junta will "elect" the next President unanimously and that between now and the end of May, it will choose the Ministers of the "new government."

"There will be several changes of Ministers," he said, "and I think some civilians will be brought into the Cabinet. For a time, they will work with the present Ministers to assure continuity." The completely renewed Junta will be sworn in then also. The Economy Minister, Dr.

The Armed forces are to stay in power in Argentina till 1984.

This was stated by an army general, one of the two or three leading spokesmen of Gen. Jorge Videla's administration at a lunch for businessmen here.

The anti-Government guerrillas had, he said, been "decapitated."

"The country will be astonished when it learns the number of victims there have been on both sides—of course, many more on their side than on ours. This was a true war, and if we have never said that in so many words, the reason was not to give the subversives the status of being gallant which they have been demanding abroad."

He said that the Government hopes to free or put on trial by the end of this year, all prisoners held "at the disposition of the executive power"—that is, the political prisoners.

But the General did not say that company executives are no longer in danger of being murdered or kidnapped. "If six or seven people decide to kill some-

Argentine military to keep power

BY ROBERT LINDLEY

José Martínez de Hoz, the only civilian in the cabinet, and it is likely that he will stay on in the post. But whether he does or not, the general declared, the policy of Dr. Martínez de Hoz will not change, "because it is the policy of the armed forces. We are convinced that it has produced desired results. There may be errors to correct, delays to remedy, but we are satisfied with what has been done up to now." So there will continue to be no easy credit subsidies or lower taxation.

Also being studied, the general said, is a way to give the unions, the Roman Catholic Church and the armed forces a minority representation in Parliament.

Hugh O'Shaughnessy writes: Adm. Emilio Mussera, commander of the Argentine Navy, held conversations with leading members of the Peronist movement in Paris last week, raising speculation that he is a bid for the presidency later this year in opposition to Gen. Videla.

The Swiss trade deficit for the first quarter totalled SFr. 498.5m. and was thus 15.6 per cent smaller than for the corresponding period of 1977. John Wicks reports from Zurich. In value, exports rose by 1.8 per cent and imports by 0.8 per cent over the period. The slow rate of foreign-trade growth were, however, due largely to a fall in average values—the result of price cuts necessitated by the rise in the Swiss Franc—of 2.7 per cent for exports and as much as 9.2 per cent for imports.

Reduces process heat input sharply

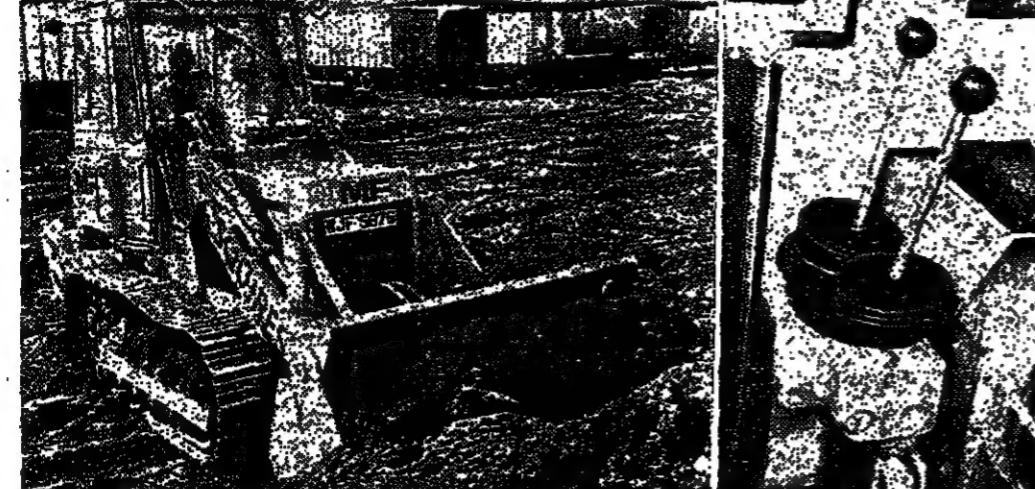

DESIGNED for a very high degree of heat recovery from distillation, scouring, and distillation process input. And the vapours are mainly wasted textiles, a pilot plant has just gone into operation.

Development was dictated by the sharp rises in the cost of fuel, water, and effluent treatment.

The initial step is to displace the water from the processed textiles by a solvent, which significantly cuts the amount of heat needed to dry the fabric, due first to the removal of surplus water, and secondly to the fact that the mixture of water and methanol present has a low specific heat and low latent heat compared with pure water.

During the distillation of the solvent are used through heat exchangers to evaporate a further quantity of the mixture with its relatively lower boiling point than the parent liquid. This

Massey Ferguson's new 490C crawler loader. The company says it has a unique control system which enables a machine of this type to be used more efficiently. The system involves the hydraulic control mechanism for the front bucket. A single lever for lift arm and bucket movement is mechanically linked to an adjacent lever (shown on right) controlling the multi-purpose bucket. When

the bucket is crowded or dumped, the operator moves the lever to left and right; as he does so, the lever controlling the bucket moves with it and the two layers retain the same relationship with one another. The operator is able to choose either lever for dump and roll back and is also able to cover both controls with one hand and get a higher standard of finish with the multi-purpose bucket in grading and scraping work.

• COMMUNICATIONS

Speech down mine shafts

IT IS a somewhat extraordinary feature of most mining operations that there is no modern receiving feed a loudspeaker system of communication between the cage in the shaft and the surface.

According to Communication and Control Engineering of Nottingham, existing methods frequently consist of pull-repo arrangements or even songs struck at the top of the shaft.

Following the inquiry into the Markham Colliery disaster in which 15 men were killed when a cage crashed to the shaft bottom, electronic systems were recommended and one outcome has been the development of Calicage, which is approved by the Health and Safety Executive as a safe system of communication.

This system makes use of the steel guide rope as audio transmission lines. An amplifier is connected across the two top ends of the ropes, the bottom ends of which are connected in form a loop. An identical assembly is installed in the cage and is inductively coupled to the rope by means of a coil-in close proximity, thus enabling signals to be sent from the cage on the move.

The amplifiers and associated coupling transformers are battery operated, with a reserve battery.

An additional hand-held unit enables the inspecting engineer to contact the surface. For additional safety, a short tone is transmitted every five seconds to confirm that the complete system is functioning correctly.

More about Calicage, which is recommended and one outcome has been the development of Calicage by CCE.

SEEING TOMORROW'S PROBLEMS TODAY!

AVAILABLE FROM Cass Electronics is an ultrasonic system that allows individuals in trouble in, say, a hospital to be located and helped quickly.

Each individual — security officers in a large building, for example — carries a lightweight ultrasonic transmitter that clips easily on to a belt or coat pocket.

In the event of trouble, a pin is pulled out of the unit causing a specific ultrasonic frequency to be emitted.

The signal is picked up by the nearest of a number of ultrasound receivers distributed throughout the building, thus giving location data and is relayed by a line back to a central control point. The name and approximate location of the individual is quickly deduced, and if desired could be shown on a map display.

Although the primary use of the alarm is expected to be in situations where staff are at risk of physical attack, it could also have applications in residential homes, schools, and offices.

• RESEARCH

Levitates and drives

WORK has been in progress at the Loughborough University of Technology in which a DC magnetic levitator has been devised which can also cause the levitated item to rotate.

In the experimental device a fixed electromagnet is fed from a DC supply controlled by a pair of parallel transistors. The height of levitated object is detected by a circular sensing coil so that the current to the electromagnet can be regulated to maintain the height constant.

In the Loughborough device the magnet pole pieces and suspended items are wedge-shaped, and normally the wedges tend to lie in the same plane. If the suspended item is displaced a little, it returns to alignment in a series of decaying oscillations.

However, if it is spun with sufficient initial angular velocity it assumes a steady rotation that is sustained indefinitely. Rotational power prospects are indicated by the fact that if the motor is braked it will restore to its original speed.

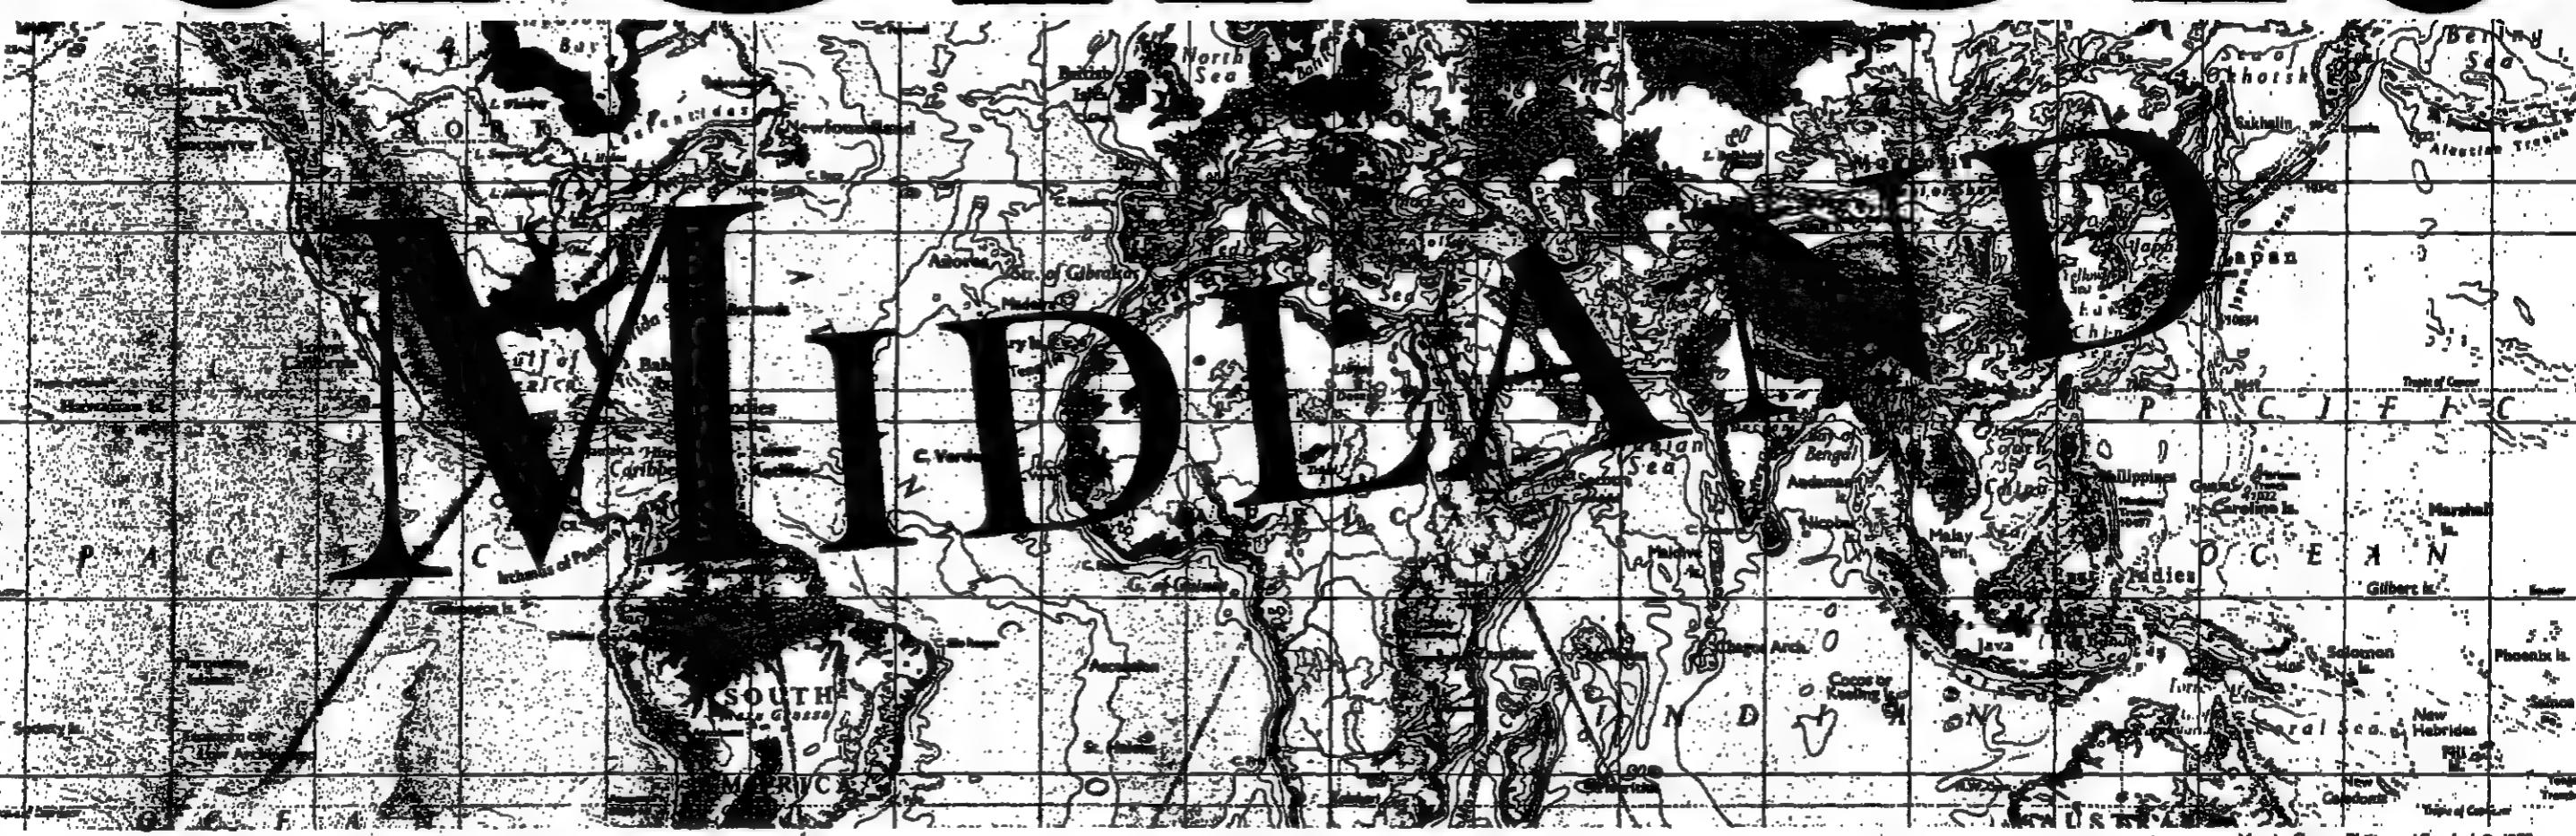

The National Research Development Corporation is keen to assess industrial interest in the work. Inquiries to Jim Strutt, NRDC, on 01 523 2400.

LUXEMBOURG

A species in danger

by David Buchan

LUXEMBOURG POLITICS are a personal affair. The size of the country — 356,000 inhabitants of which the 25 per cent who are foreigners do not have the vote — makes it so. No where else in Europe is such a large slice of the electorate on first name terms with its Prime Minister. As in some ancient Greek city states, the links between electors and elected are intimate. Each fortnight, for instance, every Luxembourg voter gets mailed a full report of Parliamentary debates free of charge — enabling him (provided he does not consign it straight to the waste paper basket) to check up on exactly what his MP or Ministers are saying or doing. "Democracy by letterbox," Luxembourgers proudly say.

In this scaled-down society, there is a wide consensus on at least the ground rules. With the exception of the Luxembourg Communist Party (which includes some of Western Europe's last unreconstructed Stalinists), but which nonetheless polled a decent 15 per cent in the 1974 elections), no political party wants to throw the EEC institutions out, or take over the booming banking sector, or question the free-market economy out of which the Grand Duchy has done very nicely. Industrial peace has reigned for the past 30 years,

The homely atmosphere which surrounds politics in Luxembourg has its roots in the small population. Although this has been good for political stability, there are dangers that the country's identity will be submerged as greater call is made for labour from outside.

without a single major strike. The two biggest parties, ally what makes Luxembourg Mayne, as Prime Minister Gaston Thorn points out, the Socialists, with 18 and 17 seats respectively at present, the Common Market. But there have shared governmental harmony before and could well do so again. M. Werner says for his by several thousand well paid

party "all doors are open." The Eurocrats, whose salaries do Liberals in the middle can turn not go up and down with the either way, as Mrs. Colette Flesch, the Liberal Mayor of Luxembourg, points out. She in general economic conditions, provides a valuable counter-fact runs Luxembourg city in such a small economy. And earlier this year held of the Christian Social Party up to 1974. Electoral promises made them by the Liberals, and the Socialists, were blown off course by the onslaught of the steel depression and the real prospect that Luxembourg would have for the first time since the 1930s people without any work at all.

It is not in the least certain that the Thorn Coalition will be returned to power in its present form after next year's poll. There are no formalised opinion polls — perhaps so small a country has no need to take its temperature in this manner — but the Christian Social Party is still the largest party at the national level, and in the October 1975 local elections it won back the power at a local level that it had lost nationally. M. Pierre Werner, the 66-year-old Christian Social leader and now something of the grand old man of Luxembourg politics, reads a lot into these results. But M. Thorn's advisers say they give no clear indicator of 1978, and that the electorate is now only "going through that period of a year before elections when dissatisfaction is at its highest".

Given the narrow ideological span between the three main parties, there are several permutations for a post-1978 coalition. Industrial peace is incidentally

through the tie with the some Lux-Frs 2.115bn. (\$84bn.) a time of painful "shake-out" Belgian franc, has drawn benefits in a low rate of imported inflation from major trading partners, and currency stability in commerce. The "snake" is

in a sense a Luxembourg invention, being the only remaining vestige of M. Werner's otherwise discarded 1970 report

which called for European economic and monetary union by the metal. The aim of the was to be useful to any future Centre-

Government and the banking system last December repealed government officials say the

Deutsche Bank, a century of universal banking

Don't expect us to do just the possible.

If you feel you have an insolvable problem, ask the Deutsche Bank. You can be sure of one thing: your search for an impossible answer is the kind of task we thrive on. In fact, as a universal bank, we think we can find your solution.

Perhaps you are considering the acquisition of a company abroad and are put off

by the complicated formalities of a takeover, or even by the first, tentative contacts. Perhaps you are planning a joint venture in a developing country and are made uncertain by the maze of tax laws and legislation that confront you. Perhaps you are looking for package financing, a Euro-loan combined with a bond issue - no problem for us, either, as a universal bank.

Our experts in all parts of the world have made it their job to see that the complicated transactions that you thought might be too complicated actually do go through.

It is the accumulated experience in universal banking which has taught our people to objectively appraise the possible and the impossible.

LUXEMBOURG II

Riding out the recession

LITTLE LUXEMBOURG has so far ridden out the recession national bank, which "manages" with less apparent discomfort than many of its bigger neighbours, seems determined to keep inside the snake, and that does not necessarily mean the snake, which has slipped banking does not say much. More cars, bigger houses, and still one of the seats on the 10-man Belgo-Luxembourg Exchange Institute has absolutely no qualms in manufacturing output and a gross domestic product growth of barely 2 per cent last year and perhaps less this year. Prime Minister Gaston Thorn in his more old Testament moods likes to remind his electorate of the dangers of whoring after false economic indicators and ignoring the country's basic structural problems. But there are certain simple equations operating in the Duchy's favour. Low or falling inflation in its main trading partner countries has brought Luxembourg's own rate down. A strong currency, inside the "snake" joint float, keeps the import bill from soaring. A booming banking sector has offset its sick steel industry, both in covering the balance of payments and in taxes paid to the state. Moderate borrowings by the state has kept interest rates low.

But there are certain simple equations operating in the Duchy's favour. Low or falling inflation in its main trading partner countries has brought Luxembourg's own rate down. A

strong currency, inside the "snake" joint float, keeps the import bill from soaring. A booming banking sector has offset its sick steel industry, both in covering the balance of payments and in taxes paid to the state. Moderate borrowings by the state has kept interest rates low.

The main impulse to the economy is from private consumption these days, not from industrial production which last year only increased 0.8 per cent in volume while construction fell 1.2 per cent. This was mainly due to companies refusing to put any more money into fixed assets, because the residential housing sector is still doing quite well. In fact since 1975/6 the government has taken off the clamps which it had previously applied to housing and consumer credit. The latter has soared, increasing by 24.5 per cent over 1977. The fact that nonetheless the inflation rate was down to 3.3 per cent on an annual basis by February 1978 shows how little Luxembourg's inflation is domestically generated.

"But for historical reasons,

there is no reason why with this level of inflation we could not be directly linked with West Germany," says M. Pierre Jaans,

the Commissaire Bancaire, and

Luxembourg's nearest equivalent to a central bank governor.

The actual monetary link is indirect but strong. The Luxembourg franc is tied at parity with the Belgian franc, and embour economy. Grand Ducal both are in the snake tied to governments have to tread

during this troubled recession. The Belgo-Luxembourg蛇 (snake) has a narrow path between mountain-tops, and the informal system of controls that attracts banks to moderate, rising 9.6 per cent in hours. That does not necessarily mean the snake, and that has slipped banking does not say much. More cars, bigger houses, and still one of the seats on the 10-man Belgo-Luxembourg market place. The was due to the automatic link with the cost of living index.

But the close working relationship with the unions bore its most spectacular result in paper Tageblatt, might take a more doctrinaire line with the banks now dissipated. On the other hand, here were unconfirmed rumours at the start of the year that some of the German banks in Luxembourg had made considerable foreign exchange losses with the abrupt fall of the dollar. Official checks and published bank results now prove these rumours to be without serious foundation.

Snake

The Luxembourg case is staying in the snake is in fact stronger than the Belgian. Last year 71 per cent of its imports came from just two countries, Germany and Belgium, which also took 48.5 per cent of Luxembourg's exports. The Duchy no longer has trade surpluses, but at least its deficit seems to have stabilised, staying at between Lux.Frs. 8.5bn. both in 1977 and 1976 (Luxembourg trade statistics are frequently difficult to disentangle from Belgium), with whom it forms a complete customs and currency union. The price performance of Luxembourg exports is hardly sensational (rising 0.6 per cent in value last year to Lux.Frs. 56.4bn., though 2 per cent in volume). This reflects very slack demand not only for total 54 per cent of total exports, but for a lesser degree for plastics and rubber (10.7 per cent of exports) and textiles (9.2 per cent). Prices of the much wider range of goods that the Duchy imports have of course risen faster, though flexible internal demand and the strength of the franc have kept the volume and cost within reasonable bounds.

More crucially, invisible receipts earned by the financial sector, which now includes some 600 or short-time working in the private sector. Unemployment has come in very handy to finance increased public works. Lux.Frs. 2.3bn. in 1974 to an estimated Lux.Frs. 2.3bn. this year, needed to provide employment and counteract the fall in January with a rise in up capital of Lux.Frs. 1.5bn. and some private participation has

three roles. First, it will state participation in certain companies, and already has done so in the "lame duck" case of the Rodange steel company to the tune of Lux.Frs. 20m. In

Raymond Kirsch, the top people to shed, but also because of the number of young people now heads the SNCI says the coming on to the labour market approach here will be "empirical, not ideological". The SNCI has no aims, nor indeed resources, to take over the commanding heights of the Luxembourg economy, and is already turning away more requests for intervention than it is granting.

Second, the SNCI will be financing part of new projects on current account, leaving at 3.8 per cent of the total price below prevailing market

budget to be financed out of rates. This, Mr. Kirsch says, borrowing. This would seem will be channelled particularly to refute the argument by some to small and medium sized members of the Christian Social business, and he points out that opposition that the

Government has let state of the risk, by putting up some finances go all to hell, though of the principal, as well as sub-

jects that equally bears out their boast of the interest". So far that M. Thorn took over in some 20 credits of this type

1974 from an exceptionally sound base.

It is only partly true to say that Luxembourg labour law makes legal strikes so complicated to arrange that the unions do not bother. Traditional Luxembourg phlegm even among the unions, coupled with the Thorn Coalition's close links with the union leadership, are the other factors

making for social peace even

though the SNCI has not yet started business in this field, it will provide export credit within the new OECD guidelines on export credit. Mr. Kirsch assures all of which is designed to put Luxembourg companies on something of an equal footing with their foreign counterparts.

D.R.

Events in steel

IT MAY BE SOME TIME before Europe's steel industry makes the structural changes needed to put it on a competitive footing with its non-European counterparts. But this year may well see in that steel making belt which stretches from southern Belgium through Luxembourg, to the German Saarland, the foundations laid for its future in the 1980s. At the pivot of this process is Arbed, the Luxembourg steel company, big in European terms and enormous in Luxembourg terms, accounting for 90 per cent of the Grand Duchy's crude steel production and also its biggest single private employer.

Some of the changes are already taking place. Arbed has played the major part in saving Luxembourg's only other steel company, Rodange Athus from extinction, taking the biggest single private shareholding in it with the aim of integrating the Rodange mills in with its own operations inside the Duchy. With the same aim in mind, Arbed has also earlier this year increased its stake in the Saar. In addition, the company is along with the Luxembourg Government now talking to the Belgian companies and Government about long term co-operation in production and investment between the two countries.

Arbed is looking to the future precisely because the present is so bleak. The company is now making thumping losses - it has just reported a Lux.Frs. 4.5bn. loss for last year or slightly more than the combined losses of 1975 and 1976. For the third successive year it has not paid a dividend. Arbed's ratio of debt to own funds may not be as alarming as that of some French and Belgian companies (quite apart from nationalised companies like British Steel), but clearly it cannot continue to shoulder this scale of operating loss, coupled with an ambitious investment programme indefinitely.

The second handicap for Arbed is the political and social impossibility for the company of laying off redundant steel workers to match the fall in production in the way that a smaller fish in a bigger national pond could. Arbed still employs nearly 20,000 in a national active workforce of less

than 1 per cent of the workforce, in the "lame duck" case of the Rodange steel company to the tune of Lux.Frs. 20m. In

Raymond Kirsch, the top

LUXEMBOURG III

Banks still the major mainstay

INTERNATIONAL banking has to crack the problem from the opposite end of the monetary spectrum. They needed to curb capital inflows, and in implementing a 25 per cent tax on non-resident holdings in DM bonds they effectively encouraged a capital market in foreign holdings of the Deutsche mark.

It is in this latter market for Euro-DM that the Grand Duchy has most specialised in. To-day as a result there are something like 20 separate West German banking houses operating in Luxembourg and it has been estimated that these account for some 50 per cent of the banking business in the country.

Against this background it is becoming increasingly obvious that the pressures on Luxembourg to keep its banking "freedoms" in step with the more rigid systems applied elsewhere in the financial world are not wholly external. And that, as a result the Luxembourg authorities are themselves anxious to be seen steering a banking course as close as possible to a "compromise within a framework that maintains our national sovereignty in this respect".

In recent months it has become clear, for example, that the Grand Duchy's relationship with West Germany is far less strained. Bankers are now beginning to describe the state of play between the Commission Bancaire and the Bundesbank in terms of a "mutual approach to a common difficulty." At the same time a number of fiscal measures in the governmental pipeline—aimed mostly at easing the tax burdens on the capital markets—should soon remove some of the internal constraints upon the banking system.

On balance, the consensus view among bankers is that Luxembourg is not about to lose its place among the top handful of major international capital markets... The international financial community probably has as much need of the sort of controlled "onshore" capital market that Luxembourg has become as Luxembourg has of the international financial community.

Business—especially in Euro-markets which after all is really what Luxembourg is all about—is perhaps less brisk than it was during the opening months of 1977 (last year as a whole saw the global volume of outstanding Eurobonds rise by some two-fifths) and banking margins are currently very low. But there is still plenty of optimism in the air.

The rise of Luxembourg as an international banking centre stems directly from the rapid development and expansion of the market for Eurobonds that occurred in the 1960s. It was in 1963 that the U.S. authorities imposed Interest Equalisation Tax and thus effectively doomed many foreign government from tapping the New York capital market for funds. This scheme for steel workers over led to the invention of the EIB, and to a capital market in the vast and growing pool of dollars held outside the U.S. America.

At the same time the German authorities were doing their best record of having no strikes for

the requirement that 30 per cent of assets must be in liquid form—instruments of one month's term or less—is relatively steep, the deployment of such liquidity is left entirely to the discretion of the individual bank.

At the last count Luxembourg had perhaps 30 per cent of the total world activity in Euro-DM business with many German banks making no bones about the fact that they are substantially involved in what, over the years against a spiralling DM currency value, has become a lucrative foreign exchange business. Some German banks have developed interests in other areas like portfolio management for clients outside Germany plus a certain amount of bullion dealing. But it is probably true to suggest that most of the German banks operating in Luxembourg have taken lending as their principal field of activity.

The European domination of the Luxembourg banking scene at the expense of the Americans became absolute in 1975 when the Germans first overtook the Americans in the number of banks in Luxembourg. To-day German and Scandinavian banks between them account for more than double the number of U.S. banks operating in the Grand Duchy.

This situation arises partly from a noticeable retreat in recent years by the American community—a retreat which appears to be motivated on two fronts. First, London would seem better placed to satisfy U.S. needs for a real international banking operation in Europe. Secondly, where U.S. debt-asset ratio in the Grand Duchy is 32 per cent, while if plate" operation arises. Nassau this kind of operation could be

more convenient for matters of tax and reserve requirement avoidance than Luxembourg.

The most positive development in American banking in Luxembourg seems to be in towards portfolio management. In the wake of the Credit Suisse debacle in Italy (at the Swiss bank's Chiasso branch), several U.S. banks are now claiming to have had a number of enquiries in this field of service. The

This is much more the case in Luxembourg than, say, in London and if the moves by the U.S. commercial banks into the securities business were to gain substantial ground, Luxembourg could prove the place for private client accounts to be handled.

Jeffrey Brown

Regime.

Luxembourg's liberal banking regime in terms of the level of financial information required by the authorities is enhanced—in the eyes of foreign bankers—by an attractive high debt to asset ratio and a favourable liquidity requirement. The permitted debt-asset ratio in the Grand Duchy is 32 per cent, while if plate" operation arises. Nassau this kind of operation could be

Steel

CONTINUED FROM PREVIOUS PAGE

Arbed's present workforce is open to be at least 4,000 too many, therefore takes the proportions of a national problem, and the way that government, unions and the company have sought to tackle this is also instructive of the way people in a small community can pull together to achieve something that would lead to social warfare in a larger country.

The steel problem was what the government, unions and employers all had in mind when last summer they reached their "tripartite agreement". As it affects steel, the bargain thereby struck was as follows: the money is being mainly spent on a new 11-metre blast furnace, with the sums involved being raised in public and private loans in Germany, Switzerland and Luxembourg itself. Second, Arbed has created what it calls an "anti-crisis division" inside the company. This followed a hard look by the company at all those jobs not considered essential—the same 8,000 at the present time. This reservoir of surplus labour has up to know been variously used to perform certain public works for the government and odd jobs for the company itself. But the basic aim is to offer this labour, retrained if necessary by Arbed itself, to potential foreign investors thinking of setting up in Luxembourg—along with assistance from Arbed in the form of capital, industrial sites and technical help.

This was the bait which Prime Minister Gaston Thorn and the Arbed president M. Emanuel Tesic put before a number of companies on their trip to the U.S. just before Easter. The pitch of Arbed and the Government is aimed not only at steel-related companies but almost any manufacturing enterprise which could use Arbed's facilities to make a start in Luxembourg. The U.S. seems to be the main hope chiefly because Luxembourg has had more experience with American investors than any other foreign investors, and that experience has been good. It must be added that Luxembourg seems to be fully aware that it is swimming against the current trend, created by the falling dollar, for Europeans to invest in the U.S. instead.

But Arbed is not leaving diversification entirely to those elusive foreign investors. With the creation of its Mecanarbed division three years ago, its downstream steel activities have considerably increased. The biggest Luxembourg engineering company, Paul Wurth SA, now comes under this division and is a specialist particularly in steel blast furnace equipment and, among other things, metal bridges, with a respectable turnover of some Lux.Frs.1.5-2.bn. a year. Drawn also on its German engineering companies, Mecanarbed is beginning to provide turn key steel plants for the Third

World, improbable large though this sort of project might seem for a small country like Luxembourg to undertake.

The Arbed group is still adding to its interests outside Europe, which include Brazilian iron ore and West Virginia coal, by announcing a wire rod joint venture in South Korea earlier this year. But the real action is much nearer home. In the Saarland, Arbed has strengthened its financial stake by taking 100 per cent in Roermond Burbach which in turn has a share in Neunkirchen Eisenwerk. The deal had the blessing of the Bonn Government, pleased that Arbed reckons it can turn certain strengths of the otherwise relatively sick Saar steel sector to advantage by integrating them more closely with Arbed's Grand Duchy operations.

Arbed may soon be part of a similar arrangement with Belgium. It's already part of a study by the U.S. consultants McKinsey, on the future of Belgo-Luxembourg steel. The logical conclusion from this report, expected in its final form this month, might be a rationalisation group between Arbed and the Belgian steel companies to plan future investment and maybe production so that their interests do not clash. Indeed talks to this end have already started under the aegis of EEC Commissioner Davignon.

A ARBED

A powerful partner for investors in Luxembourg

What can the ARBED-group, 3rd largest steel producer in Europe, do for the foreign investor?

ARBED will assist the investor at the different stages of its plant development; planning, start-up, and operations. ARBED can supply services, manpower, materials, know-how, land and equipment, either by contract or through a joint venture with the investor. ARBED executives and employees will do their best to provide effective support to the investor and to solve all local problems he may encounter.

ASSISTANCE AT PLANNING AND START UP STAGES

(a) Planning

Search and selection of sites.

Negotiations with local authorities and other parties.

Negotiation of investment aids and grants with the Government.

Settlement of legal and administrative formalities.

Engineering studies.

ASSISTANCE AT OPERATING STAGE

(b) Manpower

As a consequence of the rationalization and modernization program, now being carried out by ARBED, a few thousand of its employees and workers will become available within the next three years.

This manpower, which is experienced, productive, and adaptable, includes supporting staff, technicians, foremen, skilled workers and unskilled workers.

ARBED has four technical training centres with more than seventy-five instructors.

(c) Data Processing

From use of its powerful European computer network, ARBED can provide direct assistance in software design, programming and maintenance.

(d) Marketing

TradeARBED is an international trading company with almost 60 years of experience within the ARBED-Group. The company operates world-wide, including direct relations with the State Trading Organizations of Eastern Bloc countries.

The experience of TradeARBED in all questions of international trade (finance, currency exchange and export insurance, agents and commissions, customs, regulations, transport, freight, and chartering, etc.) can be put at the disposal of the investor as and if desired.

For further information, please contact:

HYPOBANK INTERNATIONAL S.A.

... Euromarket specialists
in Luxembourg

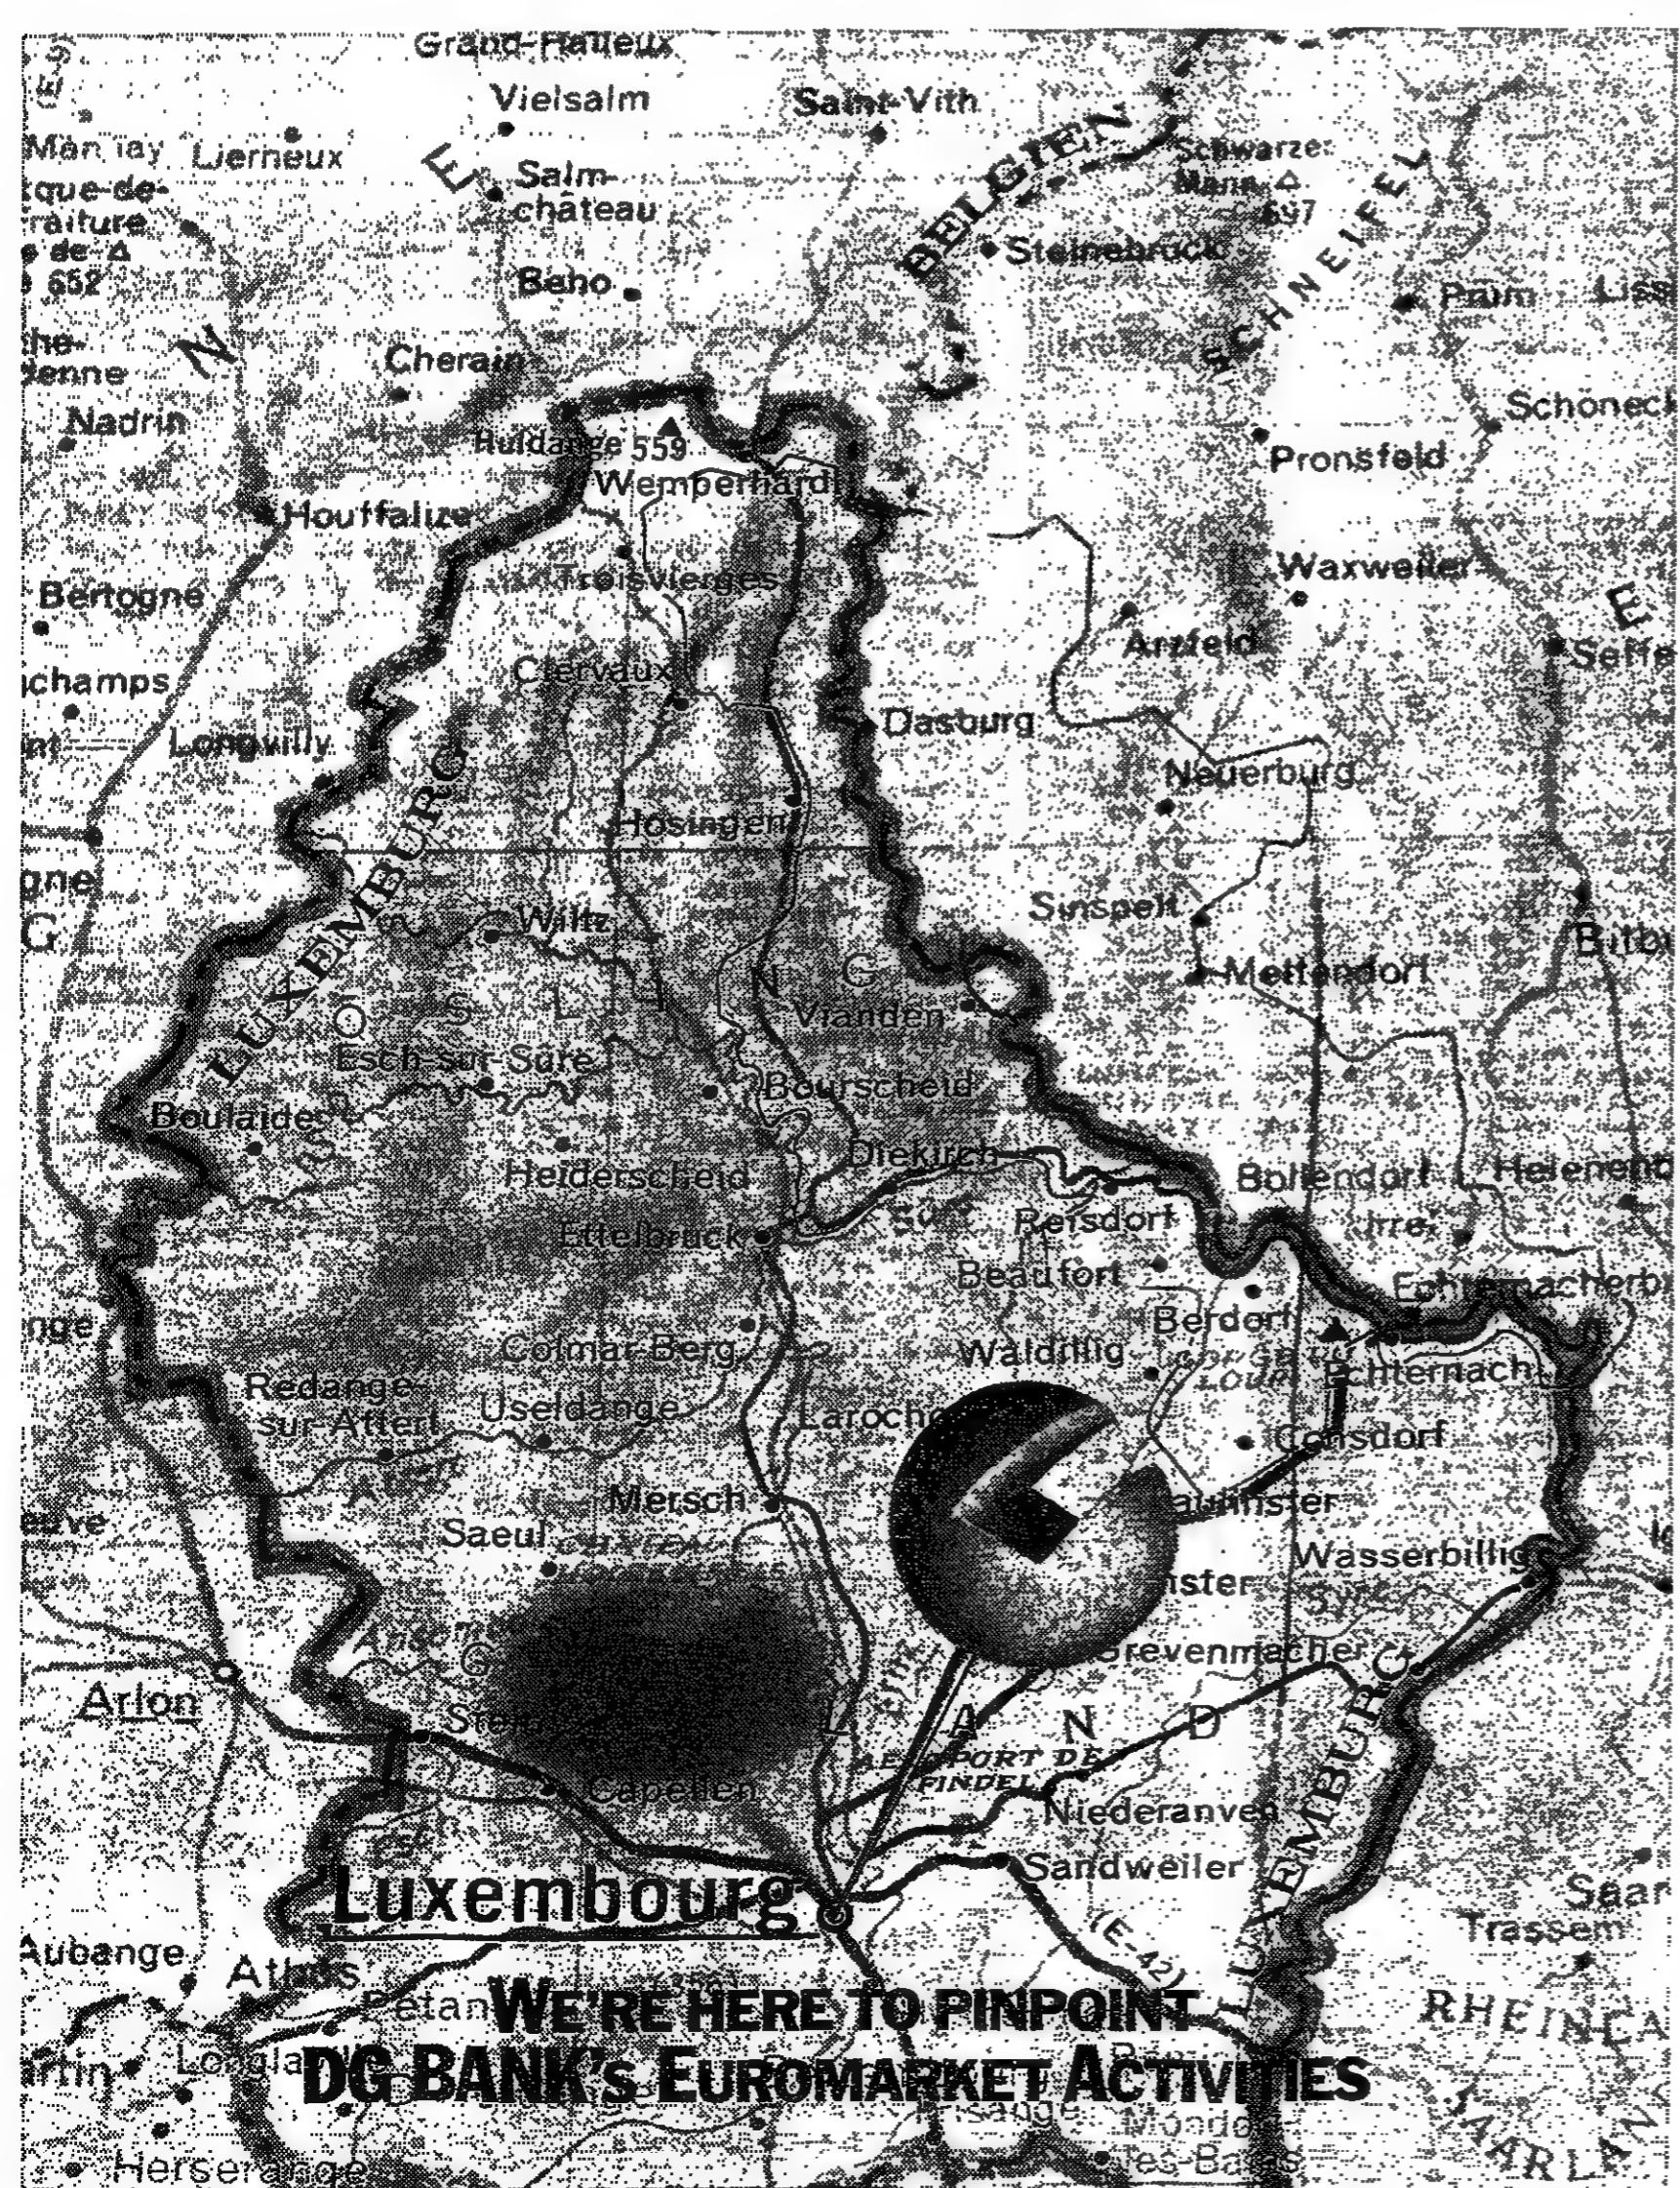

HYPOBANK INTERNATIONAL S.A.
is a wholly-owned subsidiary of Bayerische Hypotheken- und Wechsel-Bank (Hypo-Bank) in Munich, West Germany's oldest publicly-owned bank and one of its largest with total assets of more than DM 53 billion.

Operating in Luxembourg since 1972, we are engaged in all major Euro-currency activities. Our capabilities include international financings through short and medium term loans, foreign exchange dealing, money market transactions, import-export financing, and securities trading.

The Bank's diversified operations are facilitated by its own internally developed, fully integrated data processing system - SEBIOS.

Over the past five years, we have consistently strengthened our market position. Total assets in 1977 reached Lfrs. 41 billion as compared with Lfrs. 32 billion in 1976, Lfrs. 29 billion in 1975, Lfrs. 17.6 billion in 1974, and Lfrs. 15.6 billion in 1973. Capital and reserves exceed Lfrs. 1.3 billion.

**WE'RE HERE TO PINPOINT
DG BANK'S EUROMARKET ACTIVITIES**

For any major German bank active in international finance, an operating unit based in Luxembourg is a must. That's why our parent bank has been engaged here via a joint venture since 1972. Now, to strengthen this involvement substantially, DG BANK Deutsche Genossenschaftsbank of Frankfurt am Main has set up its own subsidiary, DG BANK INTERNATIONAL, as a "société anonyme" in Luxembourg.

Our activities include all aspects of corporate

financing, the management and underwriting of international bond issues and private placements, and, of course, money market and foreign exchange dealings.

DG BANK is both an internationally operating bank providing comprehensive commercial and investment banking services to prime corporate customers, public authorities and banks, and it serves as central bank for a system encompassing 5,000 local banks, ten regional banks and a num-

ber of specialized institutions in the Federal Republic of Germany. At year-end 1977, DG BANK commanded consolidated assets of DM 43,500 million (the equivalent of US \$20,708 million), and for the banking group it heads the total was DM 24,000 million (US \$114,000 million).

DG BANK INTERNATIONAL Société Anonyme, 258 Boulevard Royal (Forum Royal), Boîte Postale 661, Luxembourg. Phone: Luxembourg 4759711, Telex: Luxembourg 1878.

LUXEMBOURG IV

Trying to keep the EEC institutions

ACROSS THE deep gorge spending into the Duchy's small from Luxembourg city cluster a economy.

Therefore, the slightest threat that any of these institutions is about to depart has Luxembourg politicians aroused and standing on their dignity and treaty rights. The only immediate threat concerns the Parliament and its staff, who have increasingly found their nomadic existence irksome and, some Euro-MPs would claim, down right ridiculous. The problem stems from the fact that a single seat for the European Parliament has never been agreed. This decision can only be taken, according to the Rome Treaty, by "Governments of member states." Until the governments do so—and they show no sign of wanting to add this prickly problem to their plate of woes—the Parliament is condemned to carry on its triangular peregrination.

The EEC institutions are important for two reasons. First, for the political kudos they confer upon the Duchy. They also form an important ancillary tourist attraction. Second, the presence of several thousand well-paid bureaucrats injects the seat of the 1,500 strong Secretariat and by increasing regular and substantial level of and convenient practice, com-

mittee meetings are generally held in Brussels, within easy reach of the Commission and council officials. Many Euro-MPs, particularly late arrivals like the British who feel they were not party to the original set-up, complain about the waste of money and time travelling. So does the Secretariat, some 500 of whose staff uproot and travel down to the Strasbourg sessions, with documents packed into accompanying pantechinos—and a lesser exodus takes place for Brussels committee meetings.

Some parliamentary officials spend as many as 100 days outside their Luxembourg base, and frequent are the grouses by MPs about poor travel links with Strasbourg and Luxembourg (a complaint Luxembourgers, Mme. Colette Flesch, the Mayoress of Luxembourg city among them, now regret that right in the beginning. In 1958, the Duchy did not make a stronger pitch to have all the Parliament's activities sited there. But at that time, Luxembourg was not at all confident that its then undeveloped services sector could handle this sort of influx. Now it feels it could, but the pass may have been sold. Certainly, a growing number of MPs feel they should have a single workplace, but also feel that that city should be Brussels, "where the rest of the action is."

The catalyst, which has sharpened the dilemma, is the imminent of direct elections to the European Parliament—now to take place between June 7 and 10, 1979—which will double the number of MPs from the present 198 nominated MPs to 410 directly elected, one more if and when Greece, Spain and Portugal join the Community in the 1980s. This quite literally creates a space problem in all three centres for the Parliament. The squeeze is worst in Brussels, where in any case the Parliament's offices lease comes to an end next spring. So the Parliament has been looking at various sites in the Belgian capital—one of them so large that it gave the two other interested parties, the Luxembourg and French Governments, the idea that the Parliament, despite its statements that it was not trying to "pre-judge" an intra-governmental decision on a single site, was intending to shift completely to Brussels.

The Bank's subscribed capital is to some 7bn. European Units of Account. This will allow the Bank to give loans and guarantees of up to 17bn. EUA (\$11.39bn.) (250 per cent of subscribed capital is the rule), in recognition of the reputation that the EIB has built up since 1958 of choosing projects which are both commercially sound and economically and politically important to the Community and its member states.

Last year the EIB granted 1.57bn. EUA in loans—23.5 per cent increase over the previous year. Given the political push from EEC governments to the Bank's operations, EIB executives expect the growth to be maintained. The Luxembourg-based Bank has in addition been given by EEC ministers the job of disbursing any new money raised on the capital markets under the Brussels Commission's proposal to borrow up to 1bn. EUA, on the Commission's name. It is the Bank's estimate that close to 20,000 jobs were directly created or safeguarded by the different investments made by the Bank in 1977 alone. The priorities of the Bank can be seen from a rough breakdown of its 1977 loans. Infrastructure projects of all kinds took 975m. EUA, and this included energy (nuclear, oil and gas), electricity grids, down to

Modest

Within the last month, this fear has been soothed by the Parliament's decision to choose a more modest Brussels site. But not before the Luxembourg Government has pulled out all the stops. The most dramatic was its threat, in conjunction with the French Government, to block the setting of a new date for direct elections at the recent EEC Copenhagen Summit. In the event, the Parliament gave way on the Brussels real estate issue, and the threat never materialised. But the Thorn Government has also prepared what it believes to be an additional incentive. Last year it called in the French architect of the 1976 Montreal Olympic Stadium, and last

Making money in the air

BANKS ARE NOT the only Luxembourg institutions to have a world-wide impact. The Duchy is also the base of Luxair and Cargolux. What is more, both airlines make money, no mean feat these days. Luxair, which now runs both scheduled and chartered passenger flights and is also involved in tour operations, made some \$2m. on a 1976 turnover of LuxFr. 1bn., and employs some 700 people. Cargolux started only seven years ago, now employs 500 people in the Duchy, and already has a turnover twice that of its foster parent — though profitability for the freight airline is not yet as high, given the need to finance this rapid expansion.

Both ventures have proved commercial successes. But, as the 45-year-old M. Roger Sietsen, who as effective founder of both operations doubled up as managing director of Luxair and president of Cargolux, points out, Lucre was not the original motive. The Luxembourg Government in the early 1960s wanted to improve the travel links between Luxembourg's EEC institutions, notably the Parliament and also the Coal and Steel Community (which until 1966 was seated in Luxembourg separately from the Brussels

Commission), and the capitals of the other five EEC member states. By cajoling and twisting a few arms, it got some bigger private companies to come in on the deal, so that to-day Luxair is owned by Banque Internationale, Banque General (the two big private local banks), Caisse d'Epargne d'Etat (the state-owned savings bank), Arbed and Radio-Tele-Luxembourg — each with 15 per cent, and the Government taking the remaining quarter of the equity.

Connections

Regular connections are, then, the chief interest of the Government which appoints a commissioner to the Luxair board. But they lose the airline money, which the Government has been forced to stump up. It was therefore in both the Government's and private shareholders' interest that Luxair branch out into something more profitable. In 1967 it went into the charter business, a money spinner, and in 1973-74 it started its own tour operation business. This last has now been extended to the customer Luxair tours now sell package holidays even to those destined for him for his in-flight whisky."

he says. For the rest, Luxair would be considerable benefits in obeys IATA rules on fares, baggage (no extra weight allowed) KLM, the Belgian and Dutch free on Luxair) and so on. This carriers, as was suggested in has to be done, M. Sietzen says, because of Luxair's integral connections with all other Euro-connections. McKinsey. Commissioned by the three governments of Benelux, largely for political reasons, but also as a counterpart is that the airline possible solution for the continuing losses of Sabena, the clearing house on fares.

Haven

Luxembourg, however, is certainly a haven for other non-IATA airlines with less scruple for the cartel's rules, such as KLM, which stand to gain substantially from a complete pooling of their intercontinental flights, could agree among themselves. Luxair reckons Luxair would not pose a problem if only the two big carriers, Sabena and KLM, which stand to gain substantially from a complete pooling of their intercontinental flights, could agree among themselves.

One day, M. Sietzen claims, the three airlines will have to co-operate between themselves or with others, if only to meet the challenge of the new national carriers from the Third World and the supersonic age. Concorde flights would be restricted to Luxembourg, he claims, because of the lack of landing rights in Europe. Luxair has proved it can stand on its own, but there divisions between Brussel and

Amsterdam. M. Sietzen says he founded Cargolux "on my own concept of moving into money making projects." Mainly because of the lack of Luxembourg interest in the venture, Cargolux's structure is quite different from that of Luxair. Set up in 1971, it is owned by Luxair, Loftleidir and a Swedish shipping and freight company, Salenia, in equal parts. To Cargolux, M. Sietzen says, Salenia brought its freight handling and market experience. Loftleidir its knowledge of cargo aircraft, and Luxair the organisation. Early experience showed that there was no money in light freight on short hauls, and thereafter Cargolux has come to specialise in heavy or special loads to distant destinations, particularly Africa, the Far East and Latin America. Its present fleet consists of five DC8-63s and three CL44s, and it has just decided to buy its first Boeing 747.

With the logo "you have it, we'll fly it," Cargolux has made a speciality of difficult one-off loads, such as 25-metre Christies tree to Hong Kong or Formula One racing cars and in addition to passengers such as dolphins and crocodiles, it has carried kangaroos from Sydney to Nigeria and elephants from Bangkok to Bremen.

LUXEMBOURG V

Wines among the best

FOR reasons of size, apart from centred in a belt about 25 km wide, running along the Moselle River, mainly on the south-east of Luxembourg section of the Grand Duchy's 2,600 sq. km. do not include much good farm land—many of them are taken up by the rolling, forested hills wine-growing regions, of the Ardennes and much of Luxembourg being at the northernmost limit of Europe's facing slopes. Moreover, the Luxembourg section of the Moselle Valley, being at the heart of the entire harvest. The impact of since the second world war to increase the size of farms, held reflected in the fluctuations remain small—the average Luxembourg farm is still less than 25 hectares, and the Grand Duchy has a long way to go before it achieves self-sufficiency. It currently produces around 9,600 tonnes of beef a year, for example, 8,400 tonnes of butter, 8,400 tonnes of pork, 13,200 tonnes of milk and 24,000 tonnes of wheat corporated in small mixed flour and around 780,000 hl of beer. The average vineyard is less than two hectares, and about 12 per cent. are smaller than 0.1 hectare. The wines are, in general, light, dry and fruity, with a strong bouquet and an alcohol content of 10 to 11.5 per cent. But each has a distinct character and, it seems, a distinct market. Up until the first world war, about 95 per cent. of the wine produced annually, planted with the elbing grape about 55 per cent. is held for variety which enjoyed great domestic consumption, the rest popularity on the German market. However, with the ginseng, and to a lesser extent to formation of the Belgo-Luxembourg economic union, wine very best wines rarely leave the exports to Germany dropped country—they tend to be sharp and winegrowers were snapped up at auction by Luxembourg restaurants who taste. These showed a marked often buy up entire lots of those preference for the rarer wines, receiving the highest variety, a high-yielding cross between the riesling and sylvaner.

Such a small market is of course, easy to corner. The accounts for just under half area given over to vineyards is the planted area and slightly only about 1,200 hectares cover over half the volume of wine. But Margaret van Hattem

output. Ebling has dropped back to around 25 per cent followed by auxerrois, riesling, pinot blanc, pinot gris and traminer.

Marketing is tightly organised by an association of co-operative societies, to which almost all Luxembourg winegrowers now belong, and is strictly supervised by the government through its administration of the national trademark.

The government classifies all wines before they are released to the market in order to encourage production of high quality wine. Only the very best receive the classification "grand premier cru." In 1976, it was awarded to 9.6 per cent. of the total output but this appears to have been exceptionally high—usually the figure is around 2 per cent. or less. Of the rest produced in 1976, 2.7 per cent. were classified "premier cru," 2 per cent. "vin classe" and 42.2 per cent. simply "marque nationale." The remaining 43.5 per cent. it seems, was not up to scratch and had to be sold as "vins de table" without the national trademark label.

Each wine is allocated a number which must appear both on the producer's label and on the national trademark label, providing a check against possible fraud.

The system appears to have been successful in raising the general standard insofar as the number of wines awarded the national trademark has risen steadily since its inception in 1835. It does have drawbacks, particularly for the smaller winegrower for whom a bad year and a failure to secure a high classification may spell financial disaster. But in a small industry which puts an extremely high premium on quality this, it seems, is a necessary evil.

Margaret van Hattem

BV and BVI can help you put the Euromarket into focus

In New York Union Bank of Bavaria, UBB—(Bayerische Vereinsbank) New York Branch, is at your service with a full range of commercial banking services. Further UBB-offices are in Chicago, Los Angeles and Grand Cayman. At the beginning of 1978 a new BV branch was opened in Tokyo.

Bayerische Vereinsbank also benefits from its special status, dating back to the nineteenth century, both as a commercial bank as well as a long-term finance house.

Bayerische Vereinsbank International S.A., Luxembourg, specializes in self-liquidating short-term commercial credits in all major Eurocurrencies and its medium and long-term credits are carefully balanced against the Bank's considerable refinancing capacity.

Representative offices in London, Paris, Caracas, Johannesburg, Rio de Janeiro and Tehran, connect its international Headquarters in Munich with other financial capitals of the world.

LUXEMBOURG VI

Food and drink for tourists

LUXEMBOURG IS something of a mouse that roars. Its partners in the EEC often think so, especially when its prime minister Mr. Gaston Thorn is making one of his grandiloquent appeals for European unity or expounding his plans for expanding his plans for Europe in the world. What right, they say has a state representing only 250,000 nationals to call itself a country, to claim an equal right to be heard alongside its big adult neighbours, France and Germany. But Luxembourg is not unhappy with its Burmese image—on the contrary, it does a great deal to foster it, especially when it comes to promoting tourism.

The Grand Duchy, re-created by the Congress of Vienna in 1815 as a buffer between France and Germany, was able to survive as an autonomous unit because of an economic independence based first on its steel industry, later on its accommodating banking community. These factors gave it an advantage over other communities seeking nationhood—Basques and Bretons for example—who may have had stronger linguistic claims but less in the way of political support or financial security. However Luxembourg, while able to pay its steel workers more than any other country in Europe, is not as affluent as its standard of living might suggest. It cannot, for example, afford to build the masses of new luxury hotels which frustrated Eurocrats and businessmen claim it needs. Nor does it want to.

With annual visitors already

outnumbering the 350,000 residents three to one, the Luxembourgers are wary of being swamped and are content to see tourism expand at a slow steady rate. They cannot provide much in the way of entertainment—nightclubs, theatres and concerts do not figure prominently in the Luxembourg way of life.

Instead they offer a sort of basic do-it-yourself holiday with plenty of good eating and healthy outdoor activity.

Consequently, most of the people who come to Luxembourg for holidays come inde-

pendently, travelling in their own cars, camping or staying at small hotels, guest houses and youth centres. They are encouraged to go boating, horse riding, angling, hunting (special five-day permits are available for visitors), scuba diving and above all, walking. The Grand Duchy boasts more than 5,000 km of walking paths within its 2,800 square kilometres, carefully laid out to ensure that those getting away from it all are not made aware of the several hundred thousand others doing exactly the same thing.

Beauty

Within an easy driving distance of the heavily industrialised regions of northern France and Belgium and the Ruhr Valley, the Luxembourg landscape is extremely beautiful if unspectacular—the densely forested hills of the Ardennes giving way in the south to rolling farmland and woods, broken by clear, slow-running rivers and generally interspersed with 100 or so chateaux in varying stages of decline.

For those of a more practical bent, Luxembourg holds alternative but substantial attractions which seem to have a particular appeal for North Americans and South Africans. The regular, frequent and low-priced Icelandic Airlines flights from the U.S. and Luxair flights from Johannesburg have been highly successful for reasons best known to the increasing numbers of passengers. Luxembourg has never shown much curiosity about foreigners who wish to open accounts with its banks. "We're like the Church," says a suave Government official. "We do not ask too many questions."

This relaxed attitude derives from a love and let live philosophy necessary in a country where migrant workers and their families make up more than one quarter of the resident population. It does not always come easily.

Many Luxembourg nationals resent the high proportion of

foreign children in schools, for Luxembourg speaks French, for example, where they sometimes, or German in wall, or both, and account for more than 20 in a class of 23. Their language, not English, is not the language of the community, nor do difficulties can hold back verse in Luxembourg, nor do general academic progress, a they confuse him with language but cannot always alleviate. The language has not yet developed much as a literary medium, although a number of novels has emerged in recent decades. The Luxembourg genius for the poetic is reserved for the critics, who are nourished in such genres as "jambon", "tranches de venison", "truite au barbecue", "asperges", "fresh trout and smoked pike with bread teams".

These hostilities do not seem to extend to tourists, although a certain amount of anti-German sentiment relating to 1939-45 occasionally manifests itself. For the most part, Luxembourgers will go a long way to make a visitor feel welcome, be he a motorist who has lost his way and drops into a village cafe at 10 p.m. to seek directions or disgruntled businessman who cannot get a last-minute reservation for a hotel room.

The Government tourist office guarantees to find hotel accommodation for anyone who requests it (a pledge that it honoured when challenged by the Financial Times last week) in an attempt to counter the widely-held belief that hotels in the capital are always full up.

The Luxembourgers are also fairly relaxed about their language, basically a Rhineland dialect with a strong admixture of Dutch and French. Many Luxembourgers do, however, speak English, and are very respectful of their greatest contribution to European civilisation. And there is no better way to meet them than in a restaurant as human revolving stations.

So if long hours of eating, drinking and conversing are not your idea of a holiday, it might be wise to pack a thermos and plenty of sandwiches, or keep driving—you can cross the Grand Duchy in an hour.

M. v. H.

ANDRESENS BANK (OSLO - LUXEMBOURG)

The fourth largest commercial banking group in Norway with total balances exceeding 5 billion Norwegian Kroner.

Represented in Zürich through participation in Neue Bank A.G. and Finance Company Viking. Andresens Bank is the only Norwegian bank with its own representative office in London.

The group includes a wholly-owned subsidiary in Luxembourg.

All you need to know about Europe today can be found at the

E.E.C. Publications Office

The literature we publish, written and compiled by experts in their field, covers Europe from A to Z and includes publications that those in business or government can ill afford to be without.

The office is the publisher for all the E.E.C. institutions—the Parliament, the Council, the Commission, the Court of Justice, the Economic and Social Committee and the Court of Auditors. Besides publishing the OFFICIAL JOURNAL OF THE EUROPEAN COMMUNITIES, one of the key publications of the E.E.C., we deal with subjects as diverse as the following:

- Economic, monetary and financial affairs
- External relations—foreign trade
- Community law
- Social affairs
- Political and institutional aspects
- Industry
- Energy
- Transport
- Agriculture
- Regional policy
- Development and cooperation
- Science and technology
- Environment and quality of life
- Education
- Statistics
- Competition and internal markets

All enquiries and orders should be addressed to:

The Office for Official Publications of the European Communities
Rue de la Loi 200, Luxembourg, Grand Duchy of Luxembourg

or to any of the national sales offices.
(Catalogue is sent free of charge on request.)

A Spring Mixture

by WILLIAM PACKER

One of the chief pleasures society portraiture, the surprise afforded by the smaller mixed show is that of browsing one's way innocently towards what is often a truly personal discovery. Imaginative selection, clever or desperate hanging, perhaps sheer accident, all conspire to surprise us; and suddenly our visual taste buds get the jitters. For you've been very odd; why had I never noticed/thought: "of expected that before?" (Delete, whichever etc etc.) For when he puts on his special show, the dealer can too rarely command the resources available to the larger public, more respectably scholarly exercise, and usually must make do with whatever comes to hand. The result is that no matter how much he might dissimulate, he is often as surprised and pleased as we.

On show at Michael Parkin (until May 14) is a most attractive assortment of late 19th and, for the most part, early 20th century English paintings, drawings and prints, called, rather grandly, "The Whistler Influence," a title immediately re-stated as a subtitle, should we dare to doubt the point. But Mr. Parkin protests too much, and his is far from being a heavy, didactic offering. He has long specialised in this period in English art, and has now brought for us some excellent examples of Whistler's etching and lithography supported by a strong group of works by Walter Greaves. Poor Walter's case is well-known; however, and the interest here grows as we move by degrees away from the Master.

There are a number of obvious acolytes here, of course, artists such as Mortimer Menpes, Georg Sauter and Paul Maitland, but we soon come upon men like Robert Brough, obscure though they are, who are evidently so much closer to other notable expatriates, Sargent, or, to the far from obscure figure of Sickert. A show that brought Whistler, Sickert and Sargent together properly really would be important, and even here some intriguing possibilities occur to us. These men are after all the three crucial influences upon the development of English post-impressionism, and it might well be that Whistler, the most elegant and particular of them, was also the least powerful.

Mr. Parkin brings in several later figures, indeed bringing the line of his argument on to the Euston Road, and the modern Academy, so men like Gowing, Dumitrescu and Greenham, all good artists and well worth knowing; but Sickert is their hero. He also shows a lot of early Gerald Kelly, from the days before he fixed himself in the apic of good to see someone grasping the mildly ludicrous "Christ Ascend-

Such shortcomings sap confidence, leaving our critics with little stomach for the big commission, let alone the public protestation of faith. The bravest attempt fell short (the murals by Norman Adams at St. Albans—Kennington, for example), the rest, usually largest works unsuccessful; a time the demonstration is likely to plunge heads into bathos melodramatic Assumption of the to be small in scale, and highly sentimental. And so it is with Carel Weight, and a personal Carel Weight's other Kelly, from the days before he fixed himself in the apic of good to see someone grasping the mildly ludicrous "Christ Ascend-

Whitney Museum, New York

Plastic society

by FRANK LIPSIUS

The 28 pieces of Duane Hanson's sculpture at the Whitney Museum in New York would serve as the perfect representation of what America can dig up in subject and treatment in answer to socialist realism. The social realism of Hanson's work is achieved with the most malleable plastics, shaped over the bodies of red-blooded real live Americans, the kind of Americans who suspend Bermuda shorts over spindly legs, wear work shirts with their names on them, and expose bulging thighs to the sun in reclining positions on plastic deck chairs.

As recently as ten years ago, Hanson's social commentary took the form of bodies laid out to depict war horrors, as in "War" or the sheet-covered body of a pregnant corpse, entitled "Abortion," to express Hanson's articulated opposition to the illegality of abortion in America. Such commentary, lacking in subtlety and resonance, attracted more controversy than appreciation.

The burning issues of the 1960s, which Hanson addressed in those works, mellowed considerably and the Whitney show, consisting entirely of Hanson's work in the 70s, reveals his own mellowing and changing focus, turning political points into dramatic social satire and more recently, into bemused observation.

He finds his issues in the people he depicts. The props and scope of his work are now much more located. People are not so much representations of dramatic scenes as figures caught in a fixed, unlocated moment. A park bench, his legs part on the floor, between his legs. A man in a sweater and slacks reclines against the wall just as, around the corner, a man stands sleepily while he leans back in an office desk chair.

The change from strenuous drama to slumped shoulders is best noted in "Drug-Addict," a 1974 sculpture of a young man leaning against a wall, nodding terms of social realism.

Television

Television was, and I suppose is, a New York band which represented that city's sophisticated response to the frenzied inchoate British new wave music which filled the newspapers, if not the airwaves, last year. While the British groups suffered in their lack of musical competence as a result of their reaction to the contrived and precious music of the super-rich super-groups, Television obviously knew its way around its instruments: it was thinking man's punk.

They were perhaps a bit too thoughtful for the audience at Hammersmith on Sunday night. Since new wave music is short on melody it's appeal is in its movement and drama. Television was as passive as a string quartet and its restrained approach encouraged cries of "move about a bit" and a steady trickle to the exits. This was monstrously unfair because Television, dominated by its composer, singer and guitarist Tom Verlaine, seemed to be successfully synthesising the best elements of traditional electronic rock with a fresher, more belligerent, individualism. It was Television's misfortune to emerge co-incidentally with the new wave. It is altogether a more pretentious outfit, as its latest album reveals. In performance the lean and languorous Verlaine mumbles his vaguely poetic lyrics; his guitar was irritably scrappy; and the band might have looked more involved. But as Verlaine and the Pat Smythe trio accompanied fellow guitarist Richard Lloyd panies.

The event begins on Friday April 21 with the Salute to Satchmo, featuring Alceo Welsh and his band, Humphrey Lyttelton and Bruce Turner.

On Saturday there is a lunchtime jazz session with Bud Freeman, Pat Halcro and the Sammy Ringstone quintet. Johnny Barnes with Roy Williams. In the evening the music will be played by tenor-saxist Dick Morrissey with the Harry South Trio and singer Annie Ross.

To round off the weekend the Sunday Brunch will feature singer Elaine Delmar from the show "Bubbling Brown Sugar." The Pat Smythe trio accom-

panying Richard Lloyd panies.

Schiller-Theater, Berlin

The Tempest

by RONALD HOLLOWAY

Once in every decade Shakespeare's greatest plays pass across the German stages like birds in migration. Last season it was Hamlet; this year it's The Merchant of Midsummer Night's Dream. In the provinces nearly anything and everything is tried, and no wonder—Shakespeare, thanks to the Romantic Movement, is Germany's most popular playwright. He always stands a good head-and-shoulders above the production list, above Schiller and Brecht, and only once in recent memory did he step down from his box-office throne—on the occasion of Bertolt Brecht's 75th birthday (when West German stages tried to make up in one sweep for the Cold War years).

There are, in general, two kinds of Shakespeare production: the traditional style and the "new version." The former adheres to the poetic, majestic breath of the plays as best that talent and inspiration allows; the latter strikes out on its own like a lone prospector in search of gold in virgin territory. Both are usually painfully hard to stomach. The traditional Shakespeare relies on the sticky charm of the naive and the beginner struggling for recognition. The progressive Shakespeare substitutes tricks and gimmicks for a rich spoken text, an arrogance that sometimes goes beyond the limits of fair play or good manner.

At the risk of appearing snobbish, what seems to be lacking in German productions is an all of them. He is the Olivier honest-to-God Shakespearean of German theatre.

Why translators believe they act. Few of the young names can slander Shakespeare with on the horizon take the time to be solved. I have seen "new veterans refuse to let go of the versions" of Julius Caesar, tried-and-true wares they can bring through the provinces. I once heard a story about the interview say how much he regretted not being able to play Hamlet any more—but no word about the opportunity to look forward to Lear or Prospero.

Only Bernhard Minetti can carry a Shakespeare production on his own merits as an actor. In Alfred Kirchner's production of The Merchant at the Schiller-Theater in West Berlin, the new translation by B. K. Tragelahn is

one ensemble has not something to write home about, but it's not abusive and fairly: the Schaubühne am Halleschen Ufer. This hardy troupe days. The storm is taken care of immediately in grand style: Axel Manthey engineered a stage effect that turned the entire theatre into a lightning rod. The rest is all Minetti.

In have seen Minetti as Lear, Krapp, and a kind of disgruntled Jehovah in Thomas Bernhard's The Force of Habit—after which the Austrian playwright penned a drama simply titled Minetti. Each time this gaunt grizzled veteran assembled his past credits and applied them to the new role, until in The Merchant time-machine.

The Canadian Creative Musicians Collective, a free music orchestra and composing ensemble which has been playing in Toronto since 1974, makes its London debut on Sunday, April 30, at the ICA Theatre, in the Mall.

This is a Jazz Centre Society presentation in association with the cultural affairs section of the Canadian High Commission and the Institute of Contemporary Arts. Tickets are \$1.50 plus 25¢ temporary ICA membership.

Only on Delta— daily from London. Non-stop to Atlanta, through to New Orleans.

Starting May 1, Delta Air Lines introduces the first daily non-stop service between London's convenient Gatwick Airport and Atlanta, Georgia, the "capital" of America's Southeast... your best gateway to all the South. And Delta inaugurates the first through jet service between London and New Orleans with no change of planes.

Delta's Flight 11 leaves London every day at 12:10pm and arrives in Atlanta at 4:25pm, in New Orleans at 6:45pm. Coming back, Delta's Flight 10 leaves New Orleans at 2:45pm, Atlanta at 6:30pm and arrives in London at 7:20am. (All times are local.)

Check in at Victoria Station.
You may check in at the Gatwick check-in terminal in Victoria Station, select your seat and check in your luggage. Then board an express train to Gatwick and go directly to Delta's Flight 11. There are fast trains every 15 minutes from Victoria to Gatwick and the fare is £1.70.

Enjoy Delta Medallion Service.
You fly the Atlantic on Delta's Wide-Ride® L-1011 TriStar with Delta Medallion Service. Superb dining. Just-released films and seven-channel stereo. (There's a £1.50 charge for headsets in Economy.)

Fly with the Delta professionals.
Your flight crew in the cockpit and cabins are all Delta professionals with years of experience. They

have logged millions of air miles, flown every jet in the Delta fleet. You can be sure they'll go all out to give you a memorable trip.

You can't purchase a lower scheduled fare to Atlanta. For example, Delta's Budget or Standby single fare to Atlanta is only £2.75.

To take advantage of the Budget Fare simply pick up your ticket at least 21 days before the week you plan to leave. You'll receive confirmation of your travel time 7-14 days before the week of departure.

Naturally there are special restrictions on all discount fares, which you can get from Delta or your Travel Agent. And the number of low-fare seats is limited, so we suggest you book early.

Excellent Delta connections in Atlanta.
Delta flies to 76 cities from Atlanta, with more than 260 daily flights around the clock. You have easy Delta-to-Delta connections to all the U.S. Southeast, Southwest and West Coast. Delta has more Wide-Ride superjets from Atlanta than other airline. And Delta has twice as many employees to serve you in Atlanta as any other airline. For reservations, see your friendly Travel Agent, or call Delta in London at 01-668 0935, in Crawley 517600.

Tuesday April 18 1978

Back from the dead

MR. ROY JENKINS, the President of the European Commission, rightly remarked in his Jean Monnet Lecture some months ago that the concept of "immobilised in scepticism" following the demise of the Werner Plan and the currency upheavals of the past few years. To-day the scepticism remains widespread, especially in Britain, but there has been a certain revival if not of the idea of monetary union, then at least of closer European currency co-operation. Apart from Mr. Jenkins himself, who has intellectual distinction but few troops, the running is being made — rather surprisingly — by Chancellor Helmut Schmidt of West Germany.

Different

Very little is known of what precisely Herr Schmidt said at the meeting of the European Council in Copenhagen earlier this month. But it is clear that he did raise the subject and that he mentioned the possibility of an enlarged currency snake in which the weaker currencies (such as the £) would be allowed wider bands of fluctuation than the stronger ones (such as the D-mark), the idea of a certain pooling of reserves, and of the use of the European unit of account as a kind of reserve currency, not unlike the IMF's Special Drawing Rights. The French reaction was encouraging — indeed the subject seems to have been discussed with President Giscard d'Estaing beforehand, and so, of course, was that of Mr. Jenkins. Where it was not just sceptical, the British reaction was downright hostile.

It is true that such ideas raise at least as many questions as they answer. For example, who would be the central authority behind what would amount to the beginnings of a common monetary policy? It is also true that many of them are old hat: some of them — such as the enlargement of the snake — have been tried before, and found wanting. The snake survives well enough so long as the economies of the member countries move broadly in line, but it comes apart when there is a major divergence, especially by one of the larger currencies. The logical alternative of maintaining the snake intact by a large-scale transfer of resources from the stronger economies to the weaker has never been put into effect, and

Week-end

As it happens, Herr Schmidt is coming to London for talks this week-end. Mr. James Callaghan should have a lot of questions to ask of him; but it would be unfortunate if they were put in an unduly hostile or even sceptical tone. The Germans have a lot to give; but they must expect something in return.

It all depends on savings

THE VOLUME of retail sales in imports of raw materials and March is provisionally estimated to have fallen back a little from the February level but to have remained comfortably above the average for any quarter of last year. Sales during the first quarter of 1978 as a whole were 1% per cent higher than in the previous quarter — higher, in fact, than at any time since the last quarter of 1976. This corresponds reasonably well with what has been happening to real personal disposable income, which fell sharply during the first half of 1977 but has recently been recovering strongly because of a faster rise in earnings than in prices and because of the autumn tax cuts.

The further cuts proposed in last week's Budget will add to this recovery. The Treasury expects real net income to be up by 7 per cent on the year up to mid-1978 and then to continue rising at a much more moderate pace. The rise in incomes will lead to some rise in consumption expenditure, but the precise amount is a matter of guesswork rather than forecasting. The Treasury puts the rise at 4 per cent over the year to mid-1979 and reckons that, partly as a result of this, the volume of imports in the same period will rise twice as fast.

Small surplus

This according to the official forecast, would leave us with a small balance of payments surplus in the first half of next year, one so small that a larger rise in imports or a smaller rise in exports than those assumed could easily eliminate it. And the March trade figures published at the end of last week suggest that this is a possibility to be taken seriously. The volume of imports in the first quarter of this year, excluding items which tend to fluctuate violently from one month to another, was 12 per cent up on the (admittedly rather low) figure for the last quarter of 1977. It is true that the main increase recently has been in

The making or the breaking of the Anglo-U.S. tax treaty

BY DAVID FREUD AND MICHAEL LAFFERTY

THE fate of the Anglo-American double taxation round the world. Such countries as the U.K. and U.S. will be only too keen to use the system as an opportunity of increasing their tax take from the giant predominantly U.S. corporations operating in their economies.

Opposition to one of its clauses, which curtails the taxing rights of three individual states, is growing in the Senate. The British Government, which regards the treaty as a balanced package, is extremely unlikely — and probably politically unable — to accept removal of the clause.

If the Senate does go ahead with the threatened deletion, the U.K. would almost certainly abandon the whole treaty, which took three years to negotiate — with severe and far-reaching repercussions.

American corporations operating in Britain stand to lose back taxes estimated at \$365m. by the U.S. Treasury. On the other hand, British companies operating in the states of California, Alaska and Oregon would have to put up with what they regard as a deeply injurious tax system.

The implications are even wider than this. All companies operating in both countries would be faced with a further considerable period of fiscal uncertainty. Cross-Atlantic investment could well suffer as a result.

Most important, the implied acceptance of the "unitary tax system" operated by the three states could encourage its eventual spread all over the world.

Essentially, the unitary system means that companies are taxed not on the basis of their real profits in individual states but on their world-wide performance. In California, for example, companies are taxed according to an arithmetical formula involving three percentages, the ratios of Californian turnover to world turnover, Californian assets to world assets, and Californian payroll costs to world payroll costs, which are simply averaged. That average is the percentage of the company's world wide income which is then subject to tax in California at the rate of 9 per cent.

Week-end

The attraction of unitary taxation is that it is simple for the state to operate and gets over difficulties of determining what is a fair profit figure to tax in individual jurisdictions. The system was originally set up to cope with the U.S. interstate railroads. The system has particular attractions when it comes to multinationals, where internal transfer pricing policies and widely differing international accounting systems can make it very difficult to establish what profit is earned in what country.

However, the multinationals fear that unless the application of unitary principles to foreign companies is stopped, the 1972 to 1975 was extremely adopted by many developing

countries will go to trade investors. The U.K. gains from the change in the U.S. withholding tax are claimed to be \$15m. a year and of taxation practice is essential. Otherwise, at the margin, there would be instances in which the claims of both countries on one income generated as far as the U.S. gain brought total tax demands to be concerned. But it is unwilling to give its own estimates, possibly fearing this would undermine its bargaining position in the event of a re-run of the treaty negotiations. However, it concedes that the Americans did well in this area while pointing out that the U.K. came off best in the trade-off between capital gains and unitary tax.

The groundwork for the typical double tax treaty is now well established. So it is only the new developments and anomalies which have cropped up in the meantime that need to be bargained over. And the bargaining over this particular treaty — which went on from 1972 to 1975 — was extremely tough. In essence, the American system will rapidly gain significant advantages.

The big sticking point is not so much support for the unitary tax system, as growing concern at the way a federal treaty with a foreign power would effectively restrict states' rights.

Some prominent U.S. politicians have said that the issue of unitary tax should be dealt with in a domestic context, necessitating a separate law involving

House of Representatives approval.

reaction would be to abandon the whole treaty. One obvious alternative is to have the principle applied also to trade investors — corporate shareholders with 10 per cent or more of voting power in U.S. companies. In return, British investors in the U.S. — which operates a classic withholding tax — had the tax reduced from the former level of 15 per cent to 5 per cent. This compares with 30 per cent for domestic U.S. shareholders.

The U.S. Treasury claims that Americans will be \$85m. a year better off as a result of the U.K. tax credits, and that retrospective payments to 1973, when the imputation system began, will bring in a once-for-all \$360m.

The bulk of the pay

ments will go to trade investors. The U.K. gains from the change in the U.S. withholding tax are claimed to be \$15m. a year and of taxation practice is essential. Otherwise, at the margin, there would be instances in which the claims of both countries on one income generated as far as the U.S. gain brought total tax demands to be concerned. But it is unwilling to give its own estimates, possibly fearing this would undermine its bargaining position in the event of a re-run of the treaty negotiations. However, it concedes that the Americans did well in this area while pointing out that the U.K. came off best in the trade-off between capital gains and unitary tax.

Some prominent U.S. politicians have said that the issue of unitary tax should be dealt with in a domestic context, necessitating a separate law involving

House of Representatives approval.

Britain's threat

If the Senate does decide that the issue would be better resolved by legislation — requiring the protracted participation of both houses of Congress — the likely British

Governor Jerry Brown of California — a late convert to the outlawing of unitary tax for foreign companies.

reaction would be to abandon the whole treaty. One obvious alternative is to have the principle applied also to trade investors — corporate shareholders with 10 per cent or more of voting power in U.S. companies. In return, British investors in the U.S. — which operates a classic withholding tax — had the tax reduced from the former level of 15 per cent to 5 per cent. This compares with 30 per cent for domestic U.S. shareholders.

The relevant Senate committee — Foreign Relations — held up its approval of the treaty for more than six months, mainly because of concern at the implications of Article 9 (4), covering unitary taxation.

Although it was eventually passed into law a couple of weeks ago, a previous reservation was defeated by only two votes to five. In terms of senatorial politics, this proportion does not augur well for its future when it comes on to the floor.

The big sticking point is not so much support for the unitary tax system, as growing concern at the way a federal treaty with a foreign power would effectively restrict states' rights.

Some prominent U.S. politicians have said that the issue of unitary tax should be dealt with in a domestic context, necessitating a separate law involving

House of Representatives approval.

Yet another complicating factor in the time-table is a series of Bills before the California State legislature.

Governor Jerry Brown is supporting one measure to outlaw unitary tax for foreign companies.

Whether or not California eventually decides to revise its unitary tax system because of its decision to buy a majority stake in Marine Midland Bank in New York, and close down its subsidiary in Shanghai Banking Corporation, has been assessed for taxes on the unitary basis from 1959 to 1976, totalling \$4.2m. Yet the bank says this amount exceeds aggregate profits in California during the 21 years that Hong Kong Bank of California has been in existence. In addition, the entire capital and net worth of the subsidiary is put at only \$10m.

Indeed, the Hong Kong and Shanghai Bank says this state of affairs was one element in its decision to buy a majority

share in the Calmar Midland Bank in New York, and close down its subsidiary in Shanghai.

MEN AND MATTERS

Labour rebels in trouble

"They'll certainly have no difficulty providing human guinea pigs!"

test for various kinds of water and air pollution in developing countries. But the pesticide equipment is also bought in the U.S., especially by the Cyanamid Corporation, for regular blood checks on farm workers using spraying equipment. "It has become one of our big selling lines," says sales manager Gordon Smith. But down in Salisbury, Joe Lovibond's successors turn their hands to anything: recently they supplied equipment to the University of Lagos for monitoring the colour of spots on the backs of Nigerian frogs.

The methods for deciding the E and Q of Britain's gatemen and watchmen are rather vaguely defined. But there is no uncertainty about the ways the figures will be calculated, not forgetting "an additional factor to compensate for the effect of the change in bonus slope."

What really brings you to the heart of the matter is the Pay Performance formula:

$$[(100-E \text{ and } Q \text{ points}) + 50]$$

My advice to any lad thinking of the railways as a career is to skip the watchman's job and go straight for Peter Parker's post. It will be easier working out the pay.

Paris revisited

A fragile but alert passenger at Heathrow yesterday afternoon was the 33-year-old artist Duncan Grant, last survivor of the Bloomsbury Group. He was off to Paris for a special preview of the momentous Cézanne exhibition opening later this week at the Grand Palais.

"Cézanne was my painter grandfather," explains Grant, who will be staying for three days with the British ambassador, Sir Nicholas Henderson.

By the use of reagents, which turn blood specimens a somewhat disagreeable yellow, it can be discovered whether pesticides have lowered the level of the cholinesterase enzyme in the body. If they have, organs such as the heart and liver stop working properly.

Lovibond checked his beer with coloured glass, because the glass would not fade, but the old brewery has long since been absorbed by one of the giants: yet the family company is still in his home town of Salisbury. The managing director, Peter Fawcett, is Lovibond's great grandson. He told me: "We have come far from coloured glass, but our colorimetric testing equipment, using chemicals, is in a direct line of descent."

The bulk of the equipment a sentence to put you on your guard: "Bacillus Payment will

Peterborough-A History of Housing

Five thousand years ago, Bronze Age farmers built the first homes in Peterborough. Today, the city is a New Town — building thousands of houses in a Government expansion scheme.

Housing is available for all staff of firms moving to new premises in Peterborough. There's a large pool of labour. Communications are first-class. London is only an hour away. Rents and rates are low.

The huge building programme ensures a wide range of commercial and industrial property and sites.

The case for a bloodless revolution

LABOUR is now as likely as the Conservatives to form the next in first-past-the-post general Government. Those who reject elections in a country where this assessment must at least consider the possibility that the two-party system appears to be breaking down.

After the next election Mr. Callaghan, or his successor, will be able to cobble together some kind of Parliamentary understanding with the Scottish and Welsh nationalists and whatever is left of the Liberal Party.

It is a distressing outlook; but not for party political reasons, as I shall explain in a moment. First, let me indicate why, if I were a betting-man, my money would be by a close result, with Labour plus possible allies a nose ahead at the finishing post.

The argument starts with the opinion polls. These suggest that the Conservatives' seemingly extraordinary leads of yesterday have been slowly ebbing away—in a point at which one of the most recent gives them only a 2 per cent edge.

They do have strong support, especially on immigration and law and order. But these emotive issues are wisely regarded by the majority of voters as secondary when set against the central issues like unemployment, prices, and general management of the economy.

On those primary issues, Labour is widely regarded as possessing the more desirable policies. It is no use expounding that Mr. Healey's work has in fact been disastrous; that is beside the point. The polls, both public and private, tell us that most people believe that Labour will "do something" about unemployment, and that the Government is achieving success in reducing inflation.

Polls can, of course, be misleading, especially when it comes to predicting the number

Lord Hailsham (pictured when he was Lord Chancellor): "We need to be protected from our representatives."

of becoming Britain's first woman Prime Minister. It is a depressing prospect—as depressing as if the Conservatives did in fact win.

The reason is that the last thing we need is a further spell of Government by an unrepresentative ideological minority, whether it be the Labour Party revitalised after an election victory, or the Conservatives in the first flush of their own return.

If this seems like too stark a choice, pick up the latest work by Lord Hailsham, published this week. Like several of his

Conservative colleagues, Lord Home and Mr. Edward Heath among them, the former Quintin Hogg has become more radical in recent years. He is half way to seeing the light.

"It is only now," he says on page 13, "that men and women are beginning to realise that representative institutions are not necessarily guardians of freedom, but can themselves become engines of tyranny.

They can be manipulated by minorities, taken over by extremists, motivated by the self-interest of organised mil-

lions. There may be a written basic constitution, a Bill of Rights and possibly a federal structure. None of this could be had in the absence of some kind of PR for the Commons, an elected Senate and Liberals, there may be a chance of gradual constitutional change. The Nationalists would presumably force the regional assemblies upon us and the popular campaign in its favour. But if there were such a campaign and it was victorious the result would be little short of another bloodless English Revolution.

Our would-be constitutional reformers apparently fail to appreciate the need for popular support; they prefer discreet club lunches with "the right people." Those in positions of inordinate power—top civil servants or unrepresentative trade union general secretaries—can swallow such reformers for breakfast; only a popular movement would have the necessary strength to defend them. But there is no such movement on the horizon.

In short, Britain is unlikely to move from its present course of steady decline until there is widespread understanding of the central point: that there is a need for change as fundamental that while its methods need not be that of a bloody revolution its effects would be truly revolutionary. This may seem harsh, but what is more likely to happen—the return of a Conservative or Labour Government and the continuation of our sorry deterioration—might in the end be even more harsh on more of us.

Letters to the Editor

Retrospective legislation

From the Director, Arms for Freedom and Enterprise.

Sir.—A justified outcry has followed the Chancellor of the Exchequer's proposal to bring in retrospective legislation in the coming Finance Bill. The fact that such behaviour is constitutionally wrong was thought to have been established in this country nearly 30 years ago.

Retrospection should be fought even harder today than it was then. We must defend the principle that we live under the rule of law. It is offensive to declare that a man has behaved criminally when, at the time he acted, his actions were perfectly legal. But today we also see an increasing tendency for the Government to try to rule by decree—as in the attempts to pressurise employers not to breach incomes guidelines which have been given no foundation in law.

The Chancellor is entitled to block tax avoidance loopholes, if this is considered desirable. Until he does, no one should be guilty of an offence for legally minimising the tax he pays.

But the main reason for opposing Mr. Healey is that men must be free to act with the guarantee that they will not be arbitrarily judged to have broken a law or a decree at some later date. Such uncertainties can only discourage respect for the law and lead to more secretive actions and undercover deals.

Michael Ivens.

5, Plough Place, Fetter Lane, E.C.4.

Defending the indefensible

From Mr. W. Orlin.

Sir.—Mr. Derby (April 14) appears to believe that motorway service areas can't be criticised because they are on public trial. They aren't, although perhaps they ought to be.

As chief executive of the British Hotel and Caterers Association, Mr. Derby's views on motorway service areas are no doubt no more subjective than those of Mr. Ronay—of whom he is strongly disapproves—or for that matter, than my own.

My opinions are based on many thousands of miles of annual business motoring on the roads in Britain and Europe. My view is that motorway service areas are the quintessence of everything that is shameful and shaming about Britain. They are infinitely worse than the worst that Europe can provide. Not only is the food inedible but it is usually served in a fashion which at best is indifferent but is usually hostile, in buildings which, through lack of maintenance, have degenerated into a midden.

Mr. Derby would perhaps be better employed by getting his members to mend their ways than in attempting to defend the indefensible.

Wally Orlin.

2, Dukes Road, W.C.1.

M-way service areas

From Mr. Egon Ronay.

Sir.—Some motorway caterers are now trying to influence public opinion in a roundabout way, not, unfortunately by a radical increase in standards. Sir Charles Forte has called the Government inquiry, headed by Mr. Peter Prior, "impudence" because "we are the best in the world." Then, perhaps, under the influence of this very powerful but (numerically) minority member of the British Hotels, Restaurants and Caterers' Asso-

ciation, the association's spokesman, Mr. Clive Derby, in his letter on April 14 lists further irrelevancies.

"Referees" he calls the inquiry, as if the matter of feeding millions of motorists were a game, in which I belong in contracting out the "ref." But to influence is precisely my aim, and the committee was appointed after our 1977 survey and the media's reactions.

He is wary of accusing the Transport and General Workers Union (though not me) of "jumping on the publicity bandwagon" which published its findings on the subject simultaneously with my organisation's.

This noises his letter makes about the difficulty of feeding millions is no consolation to motorists.

Last December the committee of inquiry generally asked for evidence, and I responded by submitting the confidential reports on which our 1977 survey was based. It was only after our 1978 survey that the committee invited me to make suggestions for improvements. So Mr. Derby's jibe about "bad manners" is a forerunner of the many red herring the public are bound to be served.

Egon Ronay.

Greencoat House, Francis Street, S.W.1.

Topping-up benefit

From Mr. R. Stoen.

Sir.—I am grateful to Mr. Michael Brown (April 14) for setting out what he considers to be the two main benefits of safeguards of contracting-out. It must be remembered however, that the safeguards merely ensure that a minimum benefit broadly equivalent to the earnings-related state pension is achieved, thus reinforcing my earlier point that to contract-plus a suitable topping-up arrangement could well provide better overall benefits.

There is a vital distinction between such a contracted-out employee who is "not worse off" than in the state scheme and another who may be genuinely "better off."

Since Mr. Brown has stressed the importance of the apparent benefit safeguards of contracting-out, I must emphasise that it is largely the employer (and sometimes also the employee) who has to meet the extra cost, hence my previous reference to "the absurd financial folly" of bare-bones schemes.

It seems likely that the contracted-out scheme benefits may end up merely matching the minimum safeguard level for employees within about 20 years of retirement age, then it would seem more prudent to contract-in and allow the state to provide the same benefit at what is effectively a known fixed cost.

R. K. Sloan.

(Director and Regional Attorney, Martin Paterson Associates, Albany Place, Edinburgh.)

Losing £500 a year

From Mrs. E. Tatham.

Sir.—Regarding John L. Hardiman's letter headed "Uninformed women" (April 11). He is quite wrong to assume women choose to remain on the reduced rate National Health contributions because of their ignorance.

There are still two rules which married women have to meet before they can earn the full rate basic pension in their own right. The first is a minimum cash sum. The second is that they must have made the full rate contributions for a period equaling 9/10ths of their total working lives. Unfortunately, the contributions to the graduated pension scheme (always compulsory and earnings related) are not taken into account for this calculation. I could achieve only 50p per

monetary assets the Hyde gearing adjustment still takes account of the change in costs that have affected the company during the year. In these circumstances the gearing adjustment is based on the changing costs that have been experienced by the company and which have been charged in the profit and loss account.

If inflation causes the value of a company's assets to increase by 25 per cent, then that company will find it "easier" by a corresponding amount to repay its liabilities. But a balance sheet reflects neither the value of nor the future earnings attributable to a company's assets. Rather, the balance sheet comprises the historical cost of the assets (or their current equivalent costs). It is misleading and an oversimplification to pretend that the effect of the burden to repay a liability is reduced because of the change in costs experienced by others, or else because of an increase in the cost of replacing the assets. If sales prices rise at a lower rate than do replacement costs (as UK experience shows) the company will experience increased pressure on its cash flow (in order to fund those replacement costs) at the very moment it is claiming that the repayment of its liabilities is less of a burden.

The arguments in favour of CPP are valid arguments, but only if balance sheets are one day based on future earnings rather than on costs.

Tony Shattock.

Gosson House, Gosson Street, East Bergholt, Suffolk.

Recently fuel prices have risen 50 per cent a year and if one accepts a compound rate of inflation of 10 per cent, year-to-year price will rise by 160 per cent in ten years. Within seven years the current price will have doubled.

This makes all the more important the use of adequate and safe cavity wall and roof insulation provided that the materials used are not likely to cause problems in the future and that in our enthusiasm for insulating our roofs we do not block up all the ventilation to the extent that severe condensation results.

In the case of roof insulation it is particularly true that a little learning can be a dangerous thing.

P. J. G. Bateman.

Rectford House, Gorst Road, East Grinstead, West Sussex.

Accountancy guidelines

From Mr. A. Shearer.

Sir.—In your columns of April 12 Professor Baxter discusses the Hyde accountancy guidelines in favour of CCA (the constant purchasing power method). Professor Baxter bases his argument on the fact that "owners should judge that their capital is maintained . . . if it will generate the same future earnings."

I wholeheartedly agree with that statement, but companies rarely publish information about their future earnings, certainly not sufficient information for owners to determine whether or not the future earnings have been maintained. Furthermore there is little prospect of them doing so.

It is therefore misleading to present information on past earnings in a way that implies this relates to the making of future earnings. CPP (constant purchasing power accounting) was advocated because the best practical way of estimating future earnings based on published data, is by extrapolating accurate past information.

Since the aim is to measure the changes in costs as they affect companies (hence the depreciation and cost of sales adjustments), an appropriate index when monetary assets exceed liabilities is one that is for inflation. How much longer can company accounts and the tax system go on ignoring the staggering fact that in the past 20 years the purchasing power of the pound has fallen by about two-thirds?

D. R. Myddleton.

Cranfield School of Management, Cranfield, Bedford.

Allowing for inflation

From Professor D. Myddleton.

Sir.—To allow for inflation in the tax system a "general index" adjustment is needed to translate money amounts of different dates into "constant purchasing power." This has recently been recommended by the Meade Committee here and by Professor Hofstede in Holland.

The same kind of adjustment is needed in company accounts, yet most companies still seem content to ignore inflation. The so-called "Hyde guidelines" won't work: they leave the balance-sheet unchanged and permit no sensible comparisons over time.

The only genuine way to account for inflation is CPP (constant purchasing power) method, using an index of general purchasing power to adjust money amounts. The simplest CPP approach adjusts conventional historic cost accounts, while a more complex alternative (still on CCA) could be used to adjust some form of replacement cost accounts.

What sound arguments are there against general index-adjustments? (The Sandlands Committee opposed them nearly three years ago, but gave unconvincing reasons.)

Whether there might be sufficient advantages in allowing for inflation in company accounts and the tax system is a quite different question. As the English Chartered Accountants have clearly recognised, the Sandlands Committee was wrong to assert that CCA (current cost accounting) is a "fully comprehensive" method of accounting for inflation. CCA has nothing whatever to do with inflation.

Adjustments based on a general index of constant purchasing power are both necessary and sufficient to allow fully for inflation.

Training Programme which is second to none.

We're every bit as particular about the equipment we install. From buzzers and alarms right through to master control systems.

In fact, our Quality Control, testing and checking procedures are so comprehensive that we could be criticised for being over-cautious.

But in our business you can't be.

We're part of the largest security company in Europe and the world.

With over 70 years of experience behind us.

We've a reputation to protect.

And in a funny sort of way, it's our failures that keep us intact.

Group 4 Total Security Ltd., 7 Carlos Place, London W.1. Tel: 01-529 8765 or your local office through Yellow Pages.

GENERAL

Mr. Michael Foot, Lord President of the Council, and Mrs. Barbara Castle MP address public meeting in Central Lambeth by-election campaign, Lambeth Town Hall, S.W.2, at 8.15 p.m.

Mr. David Bassett, general secretary, General and Municipal Workers' Union, speaks at Scottish TUC Conference, Aberdeen.

Mr. Robert Cryer, Under-Secretary, Industry, addresses Small Firms Group of London Chamber of Commerce on "The Government and Small Firms" at 8.30, Cannon Street, E.C.4, 10.30 a.m.

Autumn '78 Exhibition opens, Wembley Conference Centre (until April 22).

British-Polish conference on coal mining and utilisation continues, Mining Research and Development Establishment, Brethby, Derbyshire.

Mr. Kingman Brewster, U.S. Ambassador to the U.K. speaks at banquet following conclusion of World Conference of Retailers, Grosvenor House, W.1.

International Civil Aviation Organisation meeting continues, Montreal.

To-day's Events

Law of the Sea Conference

Manor House for three-day official stay as guests of City Corporation.

National Union of Journalists' conference opens, Whitelby Bay (until April 22).

Parliamentary Business

House of Commons: Wales Bill committee.

House of Lords: Scotland Bill committee, Housing (Financial Provisions) Bill report stage.

EEC business on various definitions of treaties Orders.

Select Committee: Expenditure (General sub-committee). Subject: Response to White Paper on Civil Service (Cmn. 7117).

SPORT

Golf: Unroyal tournament, West Malling, Kent.

Witness: Lord Patten (Lord Privy Seal), 4 p.m. Room 6.

COMPANY RESULT

BSG International (full year).

COMPANY MEETINGS

National Westminster Bank, Winchester House, E.C.1, 12, Vanton Group, Midland Hotel, Manchester, 2.45.

OPERA

Royal Opera production of Der Freischütz, Covent Garden, W.C.2, 7.30 p.m.

COMPANY NEWS + COMMENT

Currys improves after second-half upturn

INCLUDING A £571,000 surplus on sale of properties, compared with £208,000, Currys marginally increased taxable profit by £1.29m. to £10.32m. in the year to January 25, 1978. Sales were better at £163.1m. against £144.4m.

Halfway through the year the surplus was down at £2.23m. (£3.85m.), the directors said that trading conditions continued to put pressure on margins. Turnover in volume terms was at a maintained level and there was very little sign of an upturn.

The net dividend for the year is stepped up to a maximum permitted £4.5361p (4.0643p), leaving a net balance of £0.01m. (£4.79m.). Tax took £5.31m. (£5.125m.) leaving a net balance of £0.01m. (£4.79m.).

HIGHLIGHTS

SHELL IS worried about the impact of the American accounting standard FAS 8 and as such is giving shareholders an early warning to figures due in a month's time. The profits performance to date is good while the company is proposing to reorganise its capital structure. Morgan Grenfell is making its second rights issue in four years while Lex also takes a look at the boom in America both on Wall Street and the Dollar. Following a sharp second half spurt the outcome from Blackwood Hodge is encouraging in light of the world recession. The second half at Currys' however, failed to show the long awaited upturn in consumer spending.

Upsurge for London United

DOUBLED TAXABLE earnings for the second year running are reported by London United Investments. For 1977 profit has increased £1.74m. to a record £1.48m. on turnover ahead from £1.22m. to £16.72m.

The Board, therefore, believes it has no alternative but to terminate the operations of this subsidiary.

Recovery seen by Royal Worcester

FOLLOWING THE severe short fall last year in the results of the U.S. and Canadian operations of Royal Worcester Spode, Sir Ronald Fairfield, chairman of Royal Worcester reports that the benefits of the merger are now commencing to be realised and he foresees this part of the group recovering strongly in 1978.

Now that sound foundations have been laid for RWS' performance should improve progressively to a very satisfactory level, adds Sir Ronald.

Apart from RWS' the group's basic earnings per share were higher at 18.13p (12.15p).

Stated net profit of £1.026m. lifts the total to a maximum permitted £1.75m. (£1.86m.).

The majority of this was earned overseas. Other interests showed profit from £1.04,000 to £546,000.

Stated basic earnings per share were higher at 18.13p (12.15p).

Stated net profit of £1.026m. lifts the total to a maximum permitted £1.75m. (£1.86m.).

The extra turnover from the Lord's shops acquired in August 1976. However, Currys says that trading has improved noticeably since before Christmas and sales now appear to be well up to expectations. So pre-tax profits for next year could be in the region of £21m., which puts the shares on a prospective multiple of 7, fully taxed.

• comment

The long-awaited upturn in consumer spending did not come early enough last year to have a significant impact on Currys' figures. Sales in the second-half year, ending January, are only 11% per cent up on the corresponding period. All of this probably relates to price rises, so volume has been static at best and margins have slipped a little.

After settling aside £1.4m. (£1.2m.) to top up the provision for unmatured profit on credit sales pre-tax profit is just 3 per cent up on last year, despite the extra turnover from the Lord's shops acquired in August 1976.

However, Currys says that trading has improved noticeably since before Christmas and sales now appear to be well up to expectations. So pre-tax profits for next year could be in the region of £21m., which puts the shares on a prospective multiple of 7, fully taxed.

Zenith expects slowdown in performance

It is unlikely that Zenith Caravans Corporation will repeat the 1977 record taxable profit of £1.32m. in the current year, members are told.

The first quarter of 1978 has seen a continuation of the low outputs of the second half of last year and while there are signs of some increase it does not appear possible that this will reach the level of the start of 1977, the directors say.

Strong efforts are being made to increase the application both of existing and new products, but proving time for their application is slow and while some success is expected from these efforts, it will not be effective in the present year, they explain.

For 1977, as reported on April 5, profit was ahead from £1.21m. to £1.32m. on sales of £11.76m. (£10.73m.). The net dividend is increased to 4.3975p (3.8375p).

MORRIS ASHBY

The offer by Bellway (U.K.) for Morris Ashby became fully unconditional on April 12—100 per cent acceptances were received in respect of both the Ordinary and Preference Shares.

BLACKWOOD HODGE

The world's largest distributor of earthmoving equipment.

Silver Jubilee

Blackwood Hodge, which started business in 1941, became a listed public company in 1953 and now celebrates 25 years of growth with record results for 1977.

1977	Increase on 1976
£282.3m	12.9%
£16.6m	30.8%
£74.9m	12.3%

1953 1977

£000 £000

Group Sales	8,100	282,274
Group Profit before Taxation	538	16,629

Hoveringham surges

63.9% to £3.55m.

AS ANTICIPATED the progress mixed concrete and is in the made in the first half of 1977, leisure and insurance industries, when profits rose from £1.23m. to £1.55m., continued at Hoveringham Group and for the full year.

The company made a loss in the second half of 1977 but as a result of measures taken will be back in profit in 1978.

The accounts reveal that during the year the group made a payment to a director of £1.000 on the termination of service contract.

Capital expenditure during 1977 increased from £1.29m. to £1.54m. and the group absorbed additional cash of £1.23m. provided by increased short term borrowings which went up to £2.05m.

Meeting Brown's Hotel, W. May 11 at noon.

Major customers for Revertex Chemicals are the carpet, paper, paints and packaging industries none of which had a particularly exciting year and some of which were in trouble.

In the current year there has been some increase in the volume of business but the problems of over-supply in the industry remain and the future position on margins therefore stays uncertain.

The deal represents the latest—and hopefully the last—move in a series of manoeuvres aimed at getting Norfolk fully back on its feet following the 1973 acquisition of Associated Hotels for £8m., which led to three years without a share listing.

The first move was to sell three of the London hotels, the Shafesbury, the Prince of Wales and the Kensington Palace, and the restaurant chain. The second was to bring trading back into profit, an aim finally achieved in the second half of last year when pre-tax profits for the year were a record £451,000.

The remaining outstanding priority was to reduce or restructure the bank loans and overdrafts which amounted to £4.4m. last year. Yesterday's announcement goes some way along this path.

The money will be spent in modernising the group's hotel facilities—increasing the number of bathrooms and adding other facilities like the Real Ale pub attached to the London Royal Court hotel. A further sum is earmarked for development of the restaurants ancillary to the hotels acquired with the Associated deal which will swell the rent roll.

Yesterday Mr. David James, managing director of Norfolk, claimed that occupancy rates in the hotels were high and that profit margins had improved as a result of the end of the "deep discounting" which has been common practice over the last few years.

It would take a further year to see what effect this will have on the group's performance.

The chairman says that trade generally is not buoyant and as yet shows little sign of recovery in 1978. He feels that 1977 must be regarded as an abnormal year for RWS and for the group as a whole 1978 should see a satisfactory recovery in profit.

This package covers the previous short term loans in addition thereto a further £2.5m. standby facility and similar amount by way of overdraft.

The money will be spent in modernising the group's hotel facilities—increasing the number of bathrooms and adding other facilities like the Real Ale pub attached to the London Royal Court hotel. A further sum is earmarked for development of the restaurants ancillary to the hotels acquired with the Associated deal which will swell the rent roll.

During the year Royal Worcester Industrial Ceramics continued to perform very satisfactorily with operating profit up by 10 per cent. On the basis of a good order book at the beginning of 1978 this company anticipates further growth.

At Welwyn Electric expense reductions coupled with investment in cost reduction equipment made last year will improve the competitiveness of the company. In the longer term for profits to be sustained at an unacceptable level under cost inflation, the chairman underlined that further steps will be essential. This normal, he said,

Revertex held to £2.8m. by low margins

THE SQUEEZE on margins seen in the second half of the previous year continued through 1977 for Revertex Chemicals, decreasing from 2.81m. on sales up 23 per cent. to 2.51m. A one-for-two scrip issue is proposed.

With the strengthened pound there was no benefit during the year from changes in the exchange rate, Sir Campbell Adams, the chairman, points out. At half-time profit was down at £1.57m. (£1.81m.).

In the current year there has been some increase in the volume of business but the problems of over-supply in the industry remain and the future position on margins therefore stays uncertain.

1st November

Bank of Scotland's office opens in the mid-town financial and business area of New York.

30th November

The British Linen Bank, one of Scotland's oldest financial institutions, becomes the largest merchant bank North of the border on the transfer to it of the business of the Bank of Scotland Finance Co. Ltd.

The 23rd Annual General Meeting of the Proprietors of the Bank of Scotland will be held on 9th May within the Head Office, Edinburgh. The following is an extract from the document to the Governor of the Bank.

The Rt. Hon. Lord Clydesmuir, K.T., C.B., M.B.E.

The British Linen Bank

In my last statement, I referred to the steps which we had taken to transfer the entire business of Bank of Scotland Finance Company Limited to the British Linen Bank Limited. It is a source of satisfaction to everyone in the Group that a new level of life has been given to the British Linen so that it can, in the role of merchant bank, continue a tradition of service to the community which dates back to 1746. From every quarter we have received the most favourable comment on this move.

North West Securities

Our other main subsidiary, North West Securities Limited, acquired, at the close of 1977, a 26% stake in Henlys Limited, a well-established company in the motor trade with its base in London. This strategic investment, which cost £4.35 million, should substantially enhance the business of North West Securities.

New York and Moscow Offices

In line with our strategy, the activities of our International Division continued to expand throughout the year and November 1977 marked the opening of Representative Offices in New York and Moscow - the latter in conjunction with the Russian-owned, London based, Moscow Narodny Bank Limited, and Morgan Grenfell & Company Limited. We believe that we shall be able to provide valuable assistance to the growing number of our customers who have trading relationships

with the two countries concerned. Our reception in both cities has been most friendly and we regard ourselves as favourably poised to participate more fully in the financing of trade with both East and West.

Bound up with the development of our International Division has been our involvement in oil financing. We achieved early prominence in this field of activity and our Representative Office in Houston, Texas, is now well established.

The Year's Results

Group Operating Profit for the year ended 28th February 1978 at £26,327,000 represents an increase of £497,000 over the previous year reflecting a decrease of £1.4 million in the Clearing Bank result, offset by improved performance by both major Subsidiaries. The principal factor for the Bank has been, of course, the fall of 3.7% in average Base Rate from 11.65% last year to 7.83% in the year under review.

North West Securities Limited once again had a highly commendable performance. Their profit of £7,063,000, sets a new record for them and reflects the result of a very satisfactory increase in turnover in highly competitive conditions.

The merchant banking operations of The British Linen Bank Limited have produced a profit of £3,189,000, which represents an improvement of some 60% over the previous year. This is a very fine achievement indeed.

Our share of Associated Company profits rose from £444,000 to £766,000; including an enhanced contribution from International Energy Bank.

Group pre-tax profit emerges as £27,593,000 - an increase of 3%.

MINING NEWS

A good March quarter for Blyvoor Gold

BY KENNETH MARSTON, MINING EDITOR

A GOOD showing in the latest average gold price of \$173, some batch of March quarterly reports \$2 higher than in the previous from the South African gold quartet, the veteran Durban Deep mines is made by the Barlow, and East Rand Proprietary gold Rand group's Blyvoor. Thanks to mines have increased their work modestly increased gold price, losses during the past quarter of \$173 per ounce, coupled with higher production and a uranium profit of R2.7m. (£1.7m.) compared with a uranium loss of R0.57m. the latest quarter's net profit after tax, to R5.63m. from R4.9m. in the December quarter.

Otherwise, the group has been to lower profits in the past quarter. Looking ahead, however, Harmony has tied up a uranium sales agreement, during the quarter under which the purchaser will make an interest-free loan to finance the erection of a new uranium plant at the mine's Mercier spruit section; previously it was expected that the cost would be around R30m.

Despite the receipt of an

average figure for Blyvor was R2.5m.

The group's quarterly net profits after tax but before capital expenditure are contained in the following table:

Deelkraal:

**58-for-100
at 130 cents**

TERMS ARE now announced of

the proposed R47.5m. (23.5m.)

rights issue to be made by the

Consolidated Gold Fields group's

new Deelkraal gold mine. Some

36.5m. shares of 20 cents (R20)

are to be offered at 130 cents

(R6.20) per share on the basis of

R8 for every 100 existing shares held at April 21. But in London yesterday Deelkraal existing shares were only 75¢.

As already reported, Gold Fields

of South Africa intend

to take over their

subsidiary and the issue is to be

underwritten by the latter

company. Major shareholders in

Deelkraal are GDSA 58 per cent

and Fernman Nominees 54 per

cent. Deelkraal's previous rights

issue in 1976 raised R50m. on the

basis of 125 shares at 145 cents

for every 100 held. The total cost

of the new gold mine is expected

to be about R100m. and the initial

function will be to mine the

mine to self-sufficiency stage.

It is hoped to start mining

towards the end of 1979. During

1978 ore production will be

expanded from 80,000 to 120,000

tonnes milled per month.

The mine has been assessed as "a

profitable medium grade gold

producer." Renounceable allotment letters and a circular to shareholders will be posted on April 23.

ROUND-UP

Voluntary liquidation of the

Nigerian subsidiary of United

Tin Areas is now taking place

and, subject to Nigerian exchange

control, some £130,000 should be

received by the parent company in

due course. The latter now

owns 51 per cent of John G.

Rollins and intends to acquire

the whole of the subsidiary, when

adequate funds are available.

Second-half earnings are ex-

pected to improve on the first-half

(pre-tax profit £4.370) and it is

expected to maintain the 10% divi-

dividend rate.

Striking members of the Aus-

tralian Workers Union at the

Rio Tinto-Zinc group's Hamer-

ley Holdings Mount Isa Pio-

nium ore mine in Western Aus-

tralia have voted to return to

work to-day. If the electricians

and train drivers follow suit

normal production should

be resumed.

Financial Times, Tuesday April 18, 1978

Expansion at

Morgan Grenfell

WITH NON-BANKING sub-

sidiaries lifting their contribution

from \$93.811 to \$145.181 net profit

of Morgan Grenfell Holdings

almost doubled from £2.85m. to

£5.45m. in 1977.

Mr. J. E. H. Collie, chairman, says 1977 was an exceptional year and that it will be difficult to maintain the record profits in 1978.

Unusually favourable circum-

stances - the swift and massive

decline in interest rates - occurred

in the year, but the group also

experienced continued underlying

growth in many aspects of its

business, he says.

As well as equity underwriting,

Embond and merger activity

the group also enlarged its interna-

tional portfolio management

business.

It also added to the number and

size of the domestic pension fund

and other accounts offshore from

\$21.45m. to \$24.457m. held

with bankers and other Northern

Territory deposits. The legisla-

tion package in Canberra covering

such matters as the establish-

ment of a national park, is the

consequence of this decision.

Although trades unions affec-

tively mining remain unaffiliated,

now there is enough of its

position to place a timescale on

development.

Assuming the passage of

Government legislation and an

eventual agreement between the

Ranger partners and local

Aborigines on issues like

roy

BIDS AND DEALS

FTI £3.5m. purchases

Less than a year since Forward Speciality Industries came to the market through a reverse takeover of funeral parlours to musical instruments group MPI comes news of a major acquisition package.

Yesterday FTI announced that it will spend £3.5m. cash in buying two companies in the field of high frequency technology. The purchase price will come from bank loans, and a DM loan.

The two are Radyne, a British company which produces equipment for medical diagnosis, with such items as electrical currents, and KKN Ultraschall, a German ultrasonic group which manufactures equipment for drilling and bonding plastics, and sterilising equipment also employing high frequencies.

Both are subsidiaries of Selanta Holdings and together produced pre-tax profits of £250,000 for 1977. Book value of their net assets in December is said to be approximately £3.1m. Radyne produced £570,000 of the profits and 52% of the assets.

Industrial and Commercial Finance Corporation, which owns about 10 per cent. of FTI, also owns 10 per cent. of Radyne, and, together with Selanta which owns 10 per cent. of the capital, has agreed to the offer.

The deal, which will substantially increase FTI's gearing, was announced yesterday at the same time as the interim profit figures which show FTI's turnover for the half-year to December as £10.2m., and pre-tax profits as £500,000. Attributable profits come to £340,000 after minorities of £15,000. Earnings per share would be 5.38p.

No comparison is made with the first half of 1976 because in this period pre-dated the MPI deal in May last year, which the directors believe "completely" alters the group's structure.

The last published figures were for the 18 month period to June 1977, during which time turnover

was £20m. and profits were £1.5m.

By the end of this period the Chappell undertaking business was sold and since then a number of the MPI properties have also been disposed of.

Yesterday Mr. Gordon Allen,

chairman of FTI, said that a top priority at present was the disposal of the remaining substantial properties which had a book value of £1m.

REO STAKIS EXPANDS HOTEL CHAIN

Reo Stakis, the Scottish based hotels, off licence and catering group is continuing to extend its hotel chain into England with the announcement yesterday of two new hotel deals worth £1m.

The group has agreed to purchase the 103-room Five Bridges Hotel at Gateshead taking the group's number of English hotels to five. It is also to acquire the 130-room Coylumbridge Hotel in Avenmore. Reo Stakis is acquiring both hotels from the Rank Organisation. Completion of the deal is due on May 1, 1978.

HILLESHOG HAS 29.8% OF MILK

Hilleshog the Swedish agricultural seeds group which is poised to launch a full scale bid for Milk Masters has now increased its stake in that company to 29.8 per cent.

The group has already agreed subject to Exchange Controls to purchase a further 14.2 per cent. shareholding in Milk Masters which would take its stake well above the 30 per cent. level at which under City Take-over rules it must make a full bid.

No comparison is made with the first half of 1976 because in this period pre-dated the MPI deal in May last year, which the directors believe "completely" alters the group's structure.

The last published figures were for the 18 month period to June 1977, during which time turnover

McLeod-Sipef fails to get London Sumatra

BY JAMES BARTHOLOMEW

McLeod-Sipef's £54m. bid for London Sumatra has failed. The offer was accepted by holders of 34.4 per cent. of London Sumatra, including 23.7 per cent. owned by the McLeod-Sipef group.

McLeod-Sipef announced yesterday that its own shareholders are now considering their position as shareholders in London Sumatra. This statement added some comforted speculation about what if anything, will happen to London Sumatra in the wake of its failed bid.

CARPET DEAL OFF

The amount of again bid by Mr. Graham Ferguson Lacey's Birmingham and Midland Counties Trust for the troubled U.S. Carpet group, Barwick Industries, is now finally off.

The bid hinted on Mr. Lacey acquiring the 88 per cent. stake in Barwick held by Mr. Eugene Barwick, the former chairman. Late last week a curious exchange of words between the two involved. Mr. Lacey confirming that Mr. Barwick had signed a letter of intent to sell his share for \$1.7m. and Mr. Barwick claiming that negotiations had not yet fully begun.

Now Mr. Lacey has withdrawn "irrevocably" from the offer, saying that Mr. Barwick's "unconventional approach" had made an already complex deal impossible. Barwick Industries has accepted the £54.5m. offer and the offer of Birmingham and Midlands would have involved a financial restructuring and the support of the 13 bankers to the group.

Mr. Lacey also explained that he was concerned that the publicity surrounding the share sale could also be harmful to Mr. William Reed, the UK carpet company of which Mr. Lacey is chairman and in which Birmingham has a near 4 per cent. stake. Reed has recently bought Barwick Industries' British carpet making subsidiary, Barwick Carpets, which has received Government support for expansion.

BHG £1.7m. share sales

Two sizeable shareholdings have been sold off for a total of around £7m. by Barrow Hepburn Group, which has recently confirmed the amount of annual dividends for 1978 following the discovery of costly and various irregularities at a subsidiary being closed down.

Barrow Hepburn has sold, at 10p each, 1,382,456 shares, representing a stake of 25.9 per cent.

Weston-Evans Group, the engineering concern, whose shares last night closed at the lesser price of 91p, up 2p, it has also disposed of 1,341,615 shares, a 15.2 per cent. holding, in Yorkshire & Lancashire Investments, for an undisclosed amount.

Hambleton Control of ambleton was recently acquired by Ferguson Securities, private company in turn controlled by Mr. Cecil McBride and Mr. Graham Ferguson-Lacey. The bulk of the holding in Yorkshire & Lancashire Investments rests for an undisclosed amount.

Weston-Evans Group, the engineering concern, whose shares last night closed at the lesser price of 91p, up 2p, it has also disposed of 1,341,615 shares, a 15.2 per cent. holding, in Yorkshire & Lancashire Investments, for an undisclosed amount.

Barrow's recent annual report showed that the 104 per cent. in Barrow

equity held by Mr. Richard Odey, chief executive of Barrow Hepburn—whose former loss-making tanning interests it now owns jointly with the National Enterprise Board—rough British Tanners Products said the proceeds of the sale of the two holdings disposed of, a profit of some £200,000 had been made on the Weston-Evans interest and they were very satisfied with the profit on the Yorkshire & Lancashire stake.

Mr. Odey said he did not know if he had bought the Weston-Evans holding but that he thought it would remain open.

HAIRLOK

Somerset's offer for Hairlok has become unconditional following approval at the EGM of Hairlok to reorganise the capital. The offer

1977 confirms Royal Insurance as market leader

Extracts from Mr. Daniel Meinertzhagen's Statement

The Annual General Meeting of the Royal Insurance Company Limited will be held in Liverpool on 10th May, 1978.

1977 Results

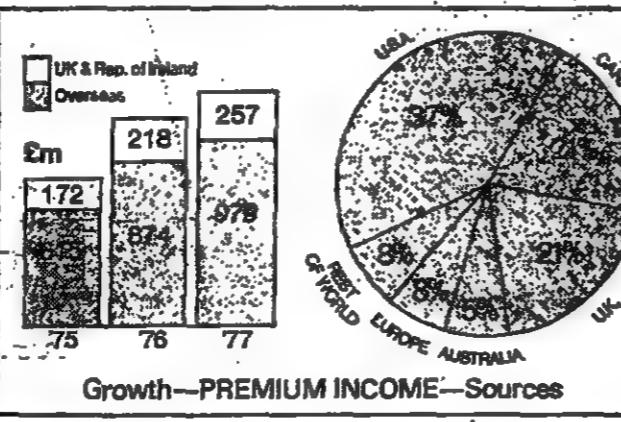

I am pleased to report a substantial increase in profits for the year 1977—our total profits before tax were almost £134m. compared with £78.6m. in 1976.

The salient features were a turn-round on underwriting from a loss of £17.8m. to a profit of £15.2m. and a further substantial increase in investment income from £92.4m. to £112.0m.

The improvement in underwriting profitability in 1977 reflected in particular a very satisfactory profit in the United Kingdom, a most welcome return to profit in the United States, and a useful profit in Canada. This result represents a further stage in the recovery in underwriting following the stringent remedial action instituted several years ago and pressed forward unremittingly in the meantime.

The long-term business has also produced a significant increase in profit at £4.3m.

After taxation and returns to be made under the Canadian Anti-Inflation Regulations and for minority interests there remains a net profit of £74.7m. attributable to the company, compared with £50.2m. in 1976.

Retained Profits

After payment of the maximum permissible dividend of 16.448p per unit of stock, retained profits are £49.8m. compared with £28.1m. in 1976. This substantial retention has provided the bulk of the increase in our capital and free reserves, which have risen virtually in proportion to the rise in premium income, thus financing from internal sources both the development of new business and the effect of inflation on our existing business.

Overseas Earnings

Our overseas operations account for nearly 80% of our total worldwide business and the improvement in our earnings overseas illustrates in a clear and practical way just how much we, as a company, contribute to the invisible export earnings of the United Kingdom.

It is vital to the long term well-being of the country that companies such as ours should have the opportunity to operate in an environment which enables us to develop our business successfully. I am glad to say that successive UK governments have consistently taken the view that our business should be able to operate in an atmosphere of maximum freedom subject only to the very necessary safeguards relating to security of policyholders.

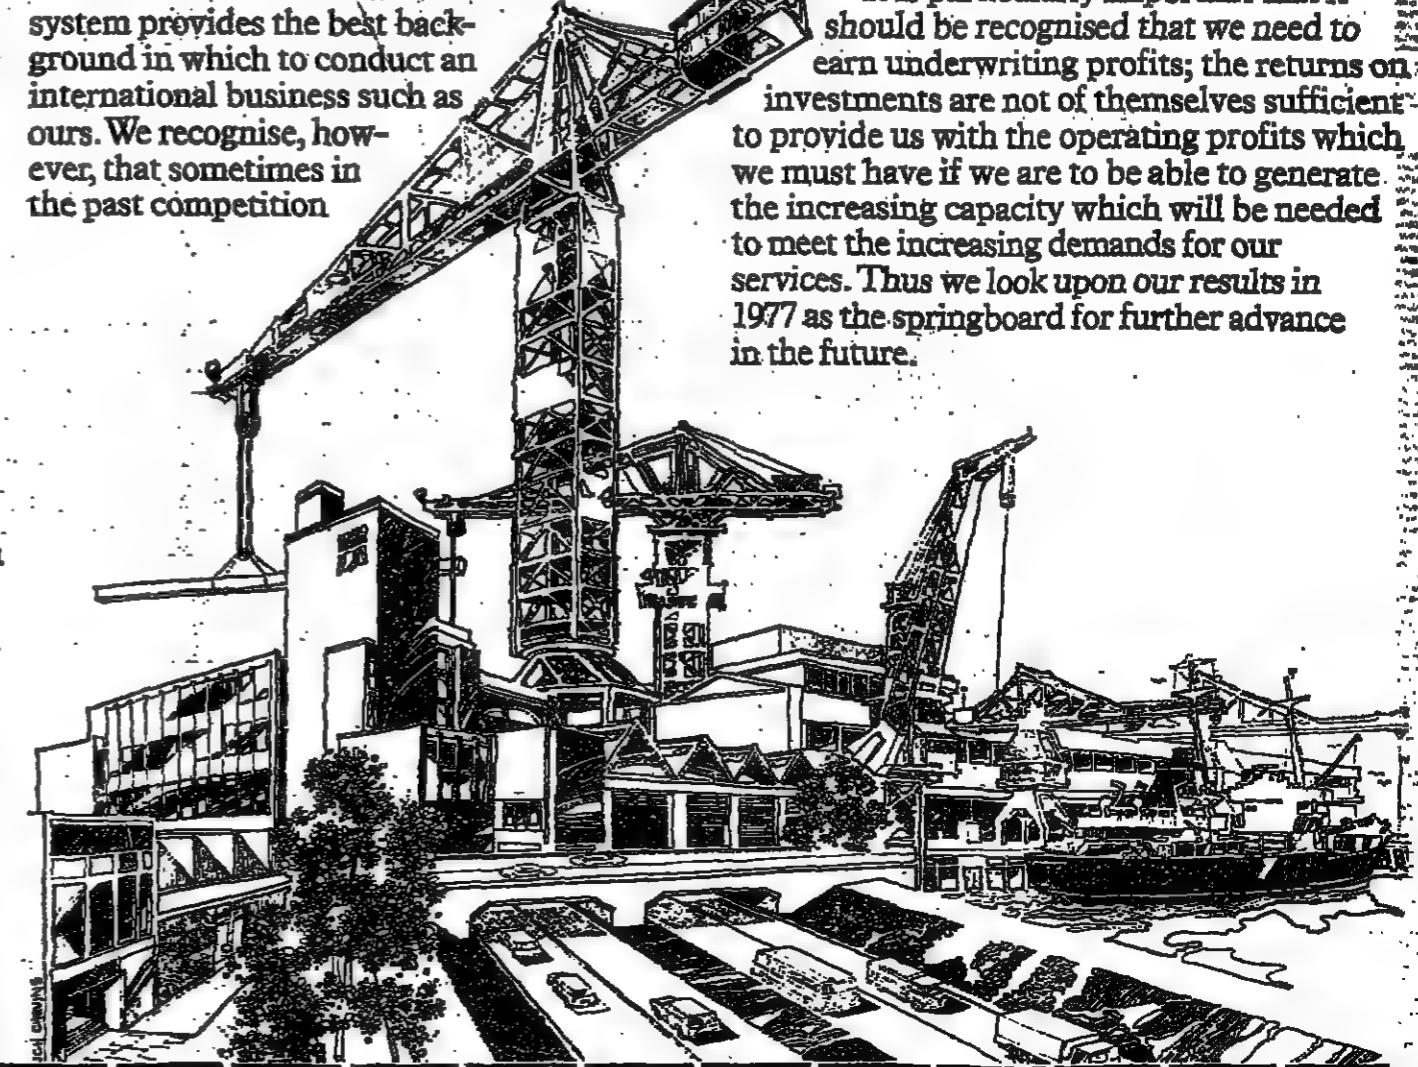

Finance for U.K. Industry

What is most important for our business, and indeed for the economic well-being of the country, in the light of our contribution in particular to overseas earnings, is that constraints unrelated to the security of policyholders, such as the direction of investment in the UK, should not be imposed upon us.

The available evidence on the subject of capital investment—and a great deal of such evidence has been submitted to the Wilson Committee—makes it quite clear that the problems of manufacturing industry in this country are not due to any lack of supply of finance; ample finance is available for potentially successful projects. It is only too likely that if the wide spread of decision-making by individual financial institutions were replaced—even in part—by centralised decision-making, the effectiveness of the investment of the available funds would be reduced; there might well be less finance flowing to the most potentially successful projects because finance has been directed to industries whose economic prospects were declining.

The Future

We believe that the free market system provides the best background in which to conduct an international business such as ours. We recognise, however, that sometimes in the past competition

GEC lowers South African profile

BY RICHARD ROLFE IN JOHANNESBURG

GEC'S DECISION to sell half its systems and engines for the key South African subsidiary to mining sector and traction units Barlow Rand, the biggest local for the state-run South African industrial corporation, and thus Railways. So it is heavily influenced by Board control is an involved with the state sector, especially ESCOM, the electricity commission, the Post Office and through the partly-owned listed illustration of the varying ways in which foreign-controlled groups in the Republic are responding to domestic pressure. These come from two different sources. The South African Government, on the one hand, is becoming increasingly concerned about the lack of harmony participation in some kind of local participation, if not necessarily control, and Government departments accordingly do business with local rather than foreign firms whenever possible.

On the other, pressure from shareholders and anti-apartheid organisations at home has led various groups with important South African subsidiaries to try to lower their profile, even though the tangle of commercial and political motives is usually difficult to unravel. For GEC operating in a number of potentially sensitive areas, future "African" can no doubt be larger, defected by ceding control to Barlow Rand in the sale of 50 per cent of GEC South Africa for R27.5m. (\$11.5m.).

At the same time, there is no reason to doubt the commercial attractions of the deal. GEC SA is already firmly entrenched in a number of growth areas, including power generation, winding

requires." Of GEC SA's local business, with annual turnover of about R200m. (\$22.6m.), about 40 per cent is power distribution-transformers, switchgear and cables, the latter in new commission, the Post Office and through the partly-owned listed

per cent in the combined group, its effect was broadly similar in that STC lowered its profile and acquired a local partner, while the South African group obtained access to STC's advanced technology—an important consideration for Barlow Rand as well.

Interestingly, though, GEC retains its direct stake in telephone Manufacturers of South Africa, a joint venture with Plessey which has been excluded from the Barlow Rand deal and is a major competitor of the STC-Alled Technologies combine.

For Barlow Rand, the GEC SA acquisition has generally been seen as an important coup. While GEC SA's earnings, at R3m. (\$10.3m.) on R200m. turnover, are relatively lower than Barlow Rand's they are regarded as high quality, and growth prospects for the GEC SA product line are clearly above average.

The deal is Barlow Rand's biggest since its 1971 takeover of Rand Mines, which has been instrumental in its growth over the past seven years. Its management should mesh in well with GEC's, since apart from the references to improving conditions for employees of all races, both groups share the philosophy of decentralising management responsibility while retaining tight financial and budgetary controls from a small head office.

Japan curb on \$ loans relaxed

By Yoko Shibusawa

TOKYO, April 17.

THE MINISTRY of Finance has relaxed the control on so-called impact loans (foreign currency borrowings by Japanese companies), to enable Japanese export-related corporations to hedge exchange risks.

A number of such companies have suspended exchange losses as a result of the increase in their exchange rate on their dollar-based credits. This began last year and is causing concern to the Ministry of Finance. Up to now impact loan borrowing has been permitted only to increase corporations' capital investment funds. Under the new guidelines, the purpose of such borrowing is unspecified.

Japan's leading fishing equipment company, Daiwa Seiko obtained permission from the authorities to day to borrow \$1.5bn. as the first purpose unspecified impact loan.

Impact loans usually carry an interest rate premium of 1 per cent over the interbank borrowing rate in the Eurodollar market. The volume of outstanding loans reached a record \$1.9bn. in 1974, and fell to \$1.63bn. in 1977.

According to financial sources, Ishikawajima-Harima (IHI), Sumitomo Heavy Industries and Honda are planning to increase impact loans this year.

PROVIDENT FINANCIAL GROUP

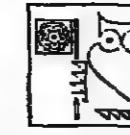

"It is gratifying to report that the Company has continued the improvement which I reported last year. Profit is up by £2.25m and turnover up by £22.56m on 1976. These results, produced in a year of great difficulty for the retail industry, with which we are closely linked, reflect the efforts of everyone in the Company."

We shall continue vigorously to develop the Group both in its traditional activities and in the new ones. So far this year, the Group is performing well."

Acquisition talks hold up Primrose share relisting

BY OUR OWN CORRESPONDENT JOHANNESBURG, April 17.

FOLLOWING THE weekend's clay production, a major announcement that Tongaat, the consumer of coal for its kilns diversified sugar group, had acquired control of the brick manufacturer Primrose, shares in Primrose remained suspended to-day in Johannesburg, and the group's managing director, Mr. David Gevissier, who has been confirmed in his post by Tongaat, said that he expected it would take up to a week before a relisting was obtained.

The shares were suspended last Friday ahead of the news that Tongaat had acquired control, because Primrose indicated through its advisers, Volkskas Merchant Bank, that it was negotiating to acquire "a major asset." Though there is no official confirmation, this is generally believed to be Aloe Minerals, a small, unprofitable producer controlled by the Rembrandt Group, better known for its worldwide tobacco and drink interests.

With the tacit approval of Tongaat, talks are apparently continuing over the acquisition of Aloe Minerals, though it is not clear whether any deal would be for cash or Primrose shares. The thinking on the part of Primrose is that "an attractive or other coal interests would provide a secure source of income, immune from the cyclical swings of the brickmaking business. In addition, Primrose is involved in the extractive industry through its owned equity.

Dutch bid for Ozapaper

BY JAMES FORTH SYDNEY, April 17.

THE DUTCH group Oce-Van der Grift is to reorganise its Australian operations. Reprographics and building materials group, Oce-Crosby is making a takeover offer for the rival office equipment group, Ozapaper. The Dutch company has held a 58.3 per cent interest in Oce-Crosby for several years. Early last year it acquired a 58.8 per cent interest in Ozapaper through the acquisition of its U.K. parent, Ozalid. At the time it was announced that the Australian companies' relationship would continue as usual, without any specific arrangements being made. Early this month however, the directors of both companies said that talks were underway which could lead to a merger.

Boral offers share swap

SYDNEY, April 17.

BORAL, which has about 48 per cent of the capital of fellow building materials group, Australian Gypsum Industries, after an intensive buying exercise, and which last week made a cash bid of \$A2.22 a share for the company, has announced a share swap alternative to the cash offer. Boral is offering one of its own shares for every ten shares in Australian Gypsum, which on to-day's price of \$A2.30 for Boral

puts a value of \$A2.07 on Australian Gypsum shares.

This compares with Australian Gypsum's market price to-day of \$A2.20, up from \$A2.15 yesterday.

Offer documents are expected to be posted in mid-May, and the bid is conditional upon acceptance by 75 per cent of remaining shareholders for 90 per cent of the outstanding shares.

European paper trade brighter

FINANCIAL TIMES REPORTER

KON. NEDERLANDSE Papierenfabrieken (KNP) expects a net profit of Fls. 1.4m. (\$650,000) in 1977 after Fls. 1m. the year before. Prices of the industry's most important raw materials have fallen and "there are signs of increasing demand for printing paper."

KNP is in a good position to profit from this improvement in view of its strong position on international markets, the company said in its annual report. Two-thirds of its paper products have been consolidated from and one third of its cardboard August onwards.

PAN-HOLDING S.A.

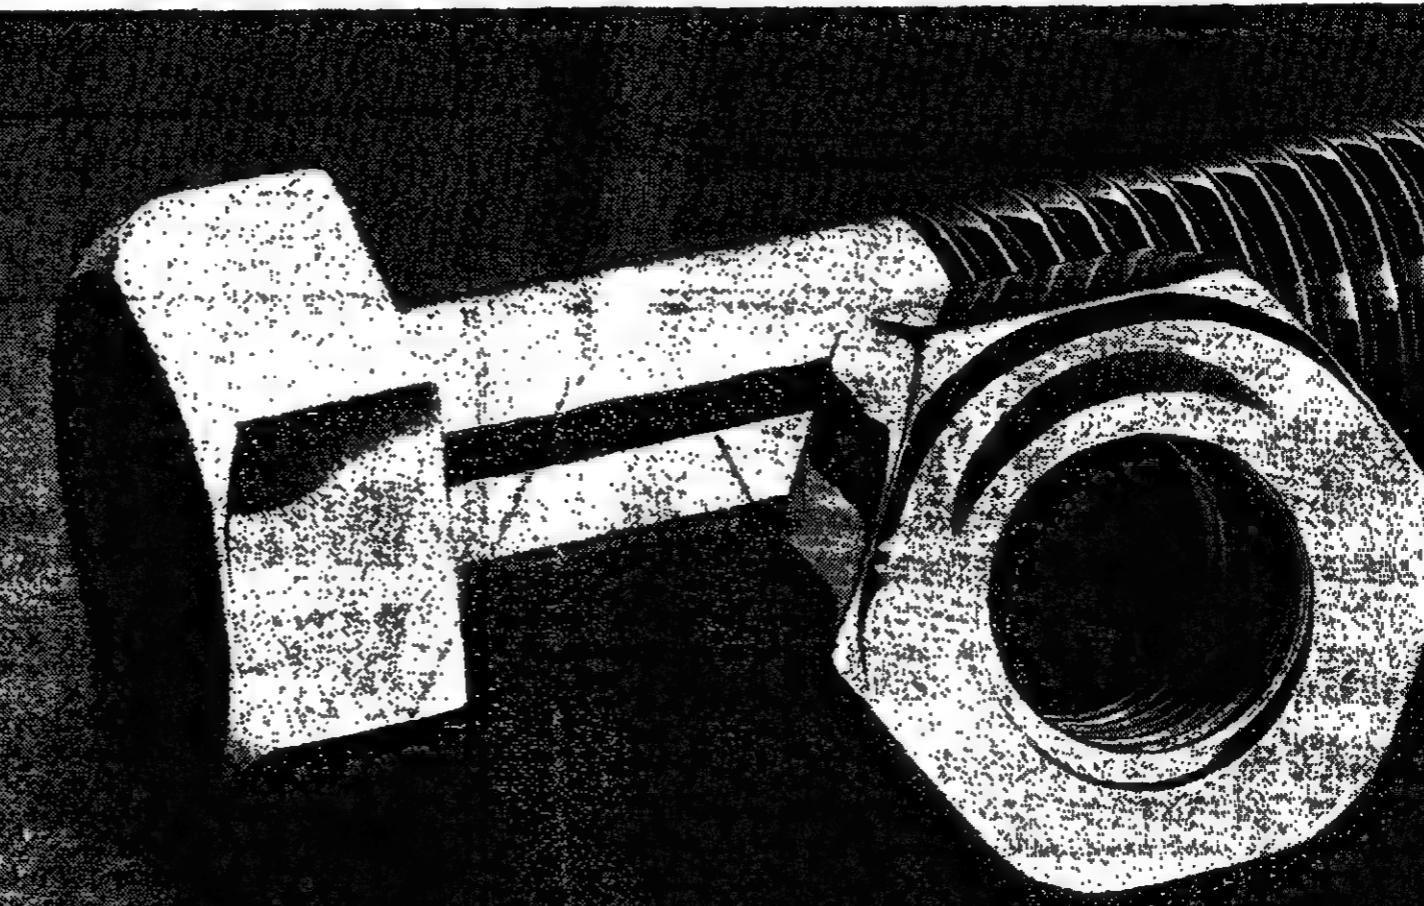

Luxembourg

As of March 31st, 1978, the unconsolidated net asset value was US\$79,383,648.10, i.e. US\$114.05 per share or US\$10 par value.

The consolidated net asset value per share amounted, as of March 31st, 1978, to US\$124.30.

HOW TO PUT TOGETHER THE PERFECT BUSINESS PARTNERSHIP IN IRVINE.

A lot of companies have gone into partnership with Irvine New Town. And the list is growing all the time. So there must be some powerful attractions.

Maybe it's accessibility. With two major airports close by. And unrivalled shipping facilities.

Maybe it's the financial and administrative assistance you get when you move to Irvine. Like possible rent free periods and maximum government grants.

Or the availability of factory space. With plenty of room for expansion when you need it.

But one of the main attractions is the place itself.

With golf courses a few minutes away and three miles of lovely sandy beaches right on your doorstep, Irvine is a beautiful place to make money.

As Beecham, Volvo and others all discovered when they went into partnership with the highly professional staff of Irvine Development Corporation.

The team which has helped over a hundred and twenty firms base their business in Irvine on something more substantial than faith alone.

If you're interested in the kind of deal we can put together for you, get in touch with our Commercial Director, Mike Thomson. He'll send you the nuts and bolts. **IRVINE NEW TOWN**

Trade Development Bank Holding S.A. Luxembourg

NOTICE IS HEREBY GIVEN that the Annual General Meeting of Shareholders of Trade Development Bank Holding S.A. (TDB Holding) will be held at the registered office of the company, 34, Avenue de la Porte-Nervé, Luxembourg at 2.30 p.m. on 9th May, 1978 for the purpose of considering and voting on the following matters.

1. Approval of the report of the Board of Directors and of the Statutory Auditor for the period ended 31st December, 1977, and approval of TDB Holding's balance sheet as at 31st December, 1977 and profit and loss account for the year ended 31st December, 1977.
2. Discharge of the Directors and of the Statutory Auditor for the proper performance of their duties for the period ended 31st December, 1977.
3. Ratification of the agreement of November 9, 1977 concerning a Notes issuance by the Company.
4. Appropriation of US\$ 440,000 to the legal reserve, distribution of a dividend of US\$ 9,021.815 (US\$ 0.55 per share) and the carrying forward of the balance of the profit.
5. Election of the Board of Directors and of the Statutory Auditor for 1978. All the Directors are eligible and stand for re-election.
6. Approval of the consolidated balance sheet as at 31st December, 1977 and profit and loss account for the year ended 31st December, 1977 for TDB Holding and its subsidiaries.

By Order of the Board
Edmond J. Safra
Chairman

NOTES:

Subject to the relevant resolution being approved, the dividend will be payable on 31st May, 1978: (i) in respect of registered shares to shareholders on the register at the close of business on 1st May, 1978 and (ii) in respect of bearer shares against surrender of Coupon No. 6 to any of the Paying Agents listed below.

Any shareholder whose shares are in bearer form and who wishes to attend the Annual General Meeting in person must produce a depositary receipt or present his share certificates to gain admission. If he wishes to be represented at the meeting, he must lodge a proxy duly completed together with a depositary receipt at the registered office of TDB Holding at 34, avenue de la Porte-Nervé, Luxembourg, not later than 8th May, 1978 at 6.00 p.m. The shareholder may obtain the depositary receipt and, if required, the form of proxy from any of the banks listed below by lodging his share certificates at their office or by arranging for the bank by whom his certificates are held to notify any of the banks listed below that the shares are so held.

*Paying Agent of TDB Holding

Any shareholder whose shares are registered will receive a notice of the Annual General Meeting at his address on the register together with a form of proxy for use at the meeting. The proxy should be lodged at TDB Holding's office in accordance with the above instructions.

The remittance of the form of proxy will not preclude a shareholder from attending in person and voting at the meeting if he so desires. The Resolutions may be passed by a simple majority provided that no single shareholder or proxy may cast votes in respect of more than one-fifth of the issued capital or more than two-fifths of all shares represented in person or by proxy at the meeting.

Copies of this notice and of the Annual Report including the Accounts of TDB Holding for the year ended 31st December, 1977, may be obtained at its registered office, and from any of the banks at the following addresses:

Where trade blossoms you'll find our ships.

Flowers identify the ships of Japan Line's modern tanker fleet. Japan Daisy, Japan Cosmos, Japan Violet... and a dozen other floral names signify speed and safety in ocean transportation. Shippers around the world have come to recognize Japan Line for its swift and efficient handling of any type of cargo. Just as flowers are the symbols of our tankers,

experience is the hallmark of the crews that sail them and the personnel who care for the customer. Japan Line operates a total fleet of 251 vessels, including speedy and sure containerships and a variety of other specialized vessels.

Wherever trade blossoms one of Japan's largest fleets is ready to assist the shipper whatever his product, wherever his market.

INTERNATIONAL FINANCIAL AND COMPANY NEWS

ENI cuts loss to \$121m. as sales increase by 17%

BY PAUL BETTS

ENTE Nazionale Idrocarburi (ENI), Italy's giant State hydrocarbon agency, has reported a loss of L102bn. (\$121m.) last year compared to a loss of L117bn. for 1976. Sales rose by around 17 per cent.

Last year's losses, however, do not take into account the positive performance of a number of the agency's principal subsidiaries which will be incorporated in ENI's 1978 balance sheet.

The subsidiaries include the Agip oil group which reported a profit of L10bn. last year, the engineering companies Snam, Snam-Progetti and Nuovo Pignone, and ENI's nuclear subsidiary Agip-Nucleare. All these companies reported profits last year.

Saipepi last year reported profits of L10bn., while Snam, Snam-Progetti, Nuovo Pignone and Agip-Nucleare showed former subsidiaries of the now disbanded State minerals agency, Egam.

ROME, April 17.

ENI's continuing losses in large measure derive from the groups' troubled textile and chemicals subsidiaries. ENI has now announced a capital write-down and subsequent capital increase operation to cover the accumulated losses of its chemicals and fibres subsidiary, Anic, which reported losses of L150bn. last year, as against L10bn. in 1976.

ENI's consolidated group sales last year increased from some L10,000bn. in 1976 to L11,700bn. while the hydrocarbon agency, currently employing more than 100,000 people, made new investments last year totalling more than L1,000bn.

In the course of last year, ENI, like the giant State holding company Istituto per la Ricerca e Industriali (IRI) has had to absorb a number of the new Agip-Nucleare, the State holding company, Egam.

Bosch to acquire control of Femsa

By Robert Graham

MADRID, April 17.

NEGOTIATIONS have been finalised for Robert Bosch International to acquire a 51 per cent. controlling stake in Fabrica Espanola de Magnetos (Femsa), the leading Spanish owned electrical concern. This means that three German companies, AEG, Siemens and Bosch, now have a major controlling stake in this sector of the Spanish industry.

No formal announcement has been made about the deal here, apparently because the Government has not yet announced its approval. But it is understood that the Bosch purchase was discussed by the Cabinet last Friday and approved.

Femsa has over the past few months been carrying out negotiations with Spanish banks for an injection of cash, in particular to service debt contracted abroad. When these negotiations proved fruitless, Femsa turned to Bosch. According to one unconfirmed report, Bosch has offered a credit of Pts.1.9bn. (\$24.2m.). However, the purchase is expected to take place through a capital increase.

Femsa with 13 plants in Spain and four abroad produces mainly batteries, distributors, switch gear and starters, alternators and coils. According to one calculation it has a 14 per cent. share of the Spanish electrical equipment market and in the case of batteries about 50 per cent. In 1976, the last year of published figures, the company had total sales of Pts.7.7bn. (\$960m.) in Spain and a further Pts.1.2bn. of exports mainly to the EEC.

This is the first important instance in the current recession of a Spanish company seeking to resolve cash flow problems by resorting to an international controlling partner. Bosch is already involved in Spain through Robert Bosch Espanola of which the German holding is 57 per cent. with a small proportion of the sum lent, say 1 per cent., should be transferred to a special reserve.

Bosch reports from Dusseldorf that Robert Bosch has raised worldwide group turnover by around 10 per cent. to DM9.2bn. for 1977 and expects a further six to seven per cent. in 1978.

No profit figures were given but the company said that it would invest about DM6.2bn. this year, up from DM5.6bn. in 1977. The company did not exclude the possibility of changing its status from a company in GRMBH form, similar to a private limited company, to a joint stock company.

The decision to pay no dividends will be put to shareholders on May 26—comes as no surprise following the record loss of Pts.4.16bn. reported by Estel in 1977.

Hambros and Boesch, the Dutch and German operating units of the Estel steelmaking concern, propose raising their dividends for 1977. The two companies, which, unlike the holding company, are quoted on Bourses in Holland and Germany, paid Pts.2.05 and Dfl2 respectively in 1976 from reserves.

THE FINANCIAL AND COMPANY NEWS

HONGKONG-MARINE MIDLAND MERGER

Complex issues for the authorities

By STEWART FLEMING IN NEW YORK AND ANTHONY ROWLEY IN HONG KONG

THE PROPOSED acquisition by Hongkong and Shanghai Bank of the U.S.-based Marine Midland Bank has been described as "an exceptional international banking group" in terms of size and geographic spread. The combined assets of the two banks of about \$10 billion in the United States and the Far East will add to the result would be in the singular position of having large local deposit bases in both the U.S. and the Far East, as well as a substantial Middle East business through a subsidiary of the Hongkong Bank, British Bank of the Middle East.

Marine Midland is the 13th largest bank in the U.S. and would be the largest ever acquired from abroad. As a result of the acquisition, the Hongkong Bank would become the first foreign bank to be represented on the New York clearing banks' Committee, although indirectly.

Before the Hongkong Bank can complete the acquisition of 51 per cent. of Marine Midland's stock it must gain approval from various regulatory authorities. That is a hurdle which has presented at least one large foreign banking acquisition in the U.S. — the proposal in 1973 that Barclays Bank take over Long Island Trust. It was blocked by the New York State banking authorities.

Advantages

It is already clear that the acquisition is likely to raise complex and some unique issues for the agencies that have to approve it. They include the Federal Reserve Board, the New York State banking department, and the Securities and Exchange Commission (SEC). The Hong Kong Bank must be greatly encouraged, however, by remarks made by the Federal Reserve chairman, Mr. William Miller, last week stressing the advantages of the proposal and indicating preliminary support.

The deal promises to become the first large acquisition in the banking sector and since the securities and exchange commission could be involved, because the proposal involves Hong Kong and Shanghai making a bid after 20 per cent. of Marine Midland's issued stock, because the deal involves the Marine Midland's holding company, rather than the bank directly, the SEC will be involved in addition to the U.S. bank authorities.

This acquisition, because it is last year, the SEC drew up disclosure rules for tender offers requiring disclosure of financial data that is "material." The agency has yet to devise disclosure rules for a bank taking a tender offer. Early indications suggest that given the large minority public stake that will remain after the merger, and even the agency's recent aggressive record, the SEC could well attempt to get precedents.

The U.S. authorities could be unhappy about the Hongkong Bank, to

Michael Sundberg, chairman of the Hongkong and Shanghai Banking Corporation (left) and Edward Duffy, chairman of Marine Midland Banks, Inc.

it completed, the Hongkong Bank moratorium was waived, term would be supervised by the portables in 1974 when Barclays Bank slipped in.

Hong Kong banking authorities are likely to call for greater co-operation between the U.S. and Hong Kong authorities because of the singular joint intercalibration of the two banks, and to try to ensure that the international operations of the two groups do not fall between two regulatory stools.

The Hong Kong banking ordinance lays down powers of control over banks and the duties of banks on matters such as minimum holdings of specified liquid assets, maintenance of reserves, the maintenance of adequate provision for bad and doubtful debts, minimum paid-up capital limitations on the holding of shares, and loan by banks and other limitations of advances, among other things.

Issue function

Apart from the general banking ordinance, the Hongkong Bank also has its own special ordinance, the Hongkong and Shanghai Banking Corporation Ordinance, which is in effect the bank's articles and memorandum of association.

This governs such things as the Hongkong Bank's note issuing function on behalf of the Hong Kong Government.

Chartered Bank is the either bank of issue—and its activities as banker to the Government.

It does not, however, make the Hongkong Bank a lender of last resort, as is sometimes supposed.

In Hong Kong there is a virtual absence of Government debt and reserves, he was carefully laying his plans for a major acquisition by his own bank in America, and morally could hardly have continued supporting a semi-closed-door policy.

One section says that a bank is not to acquire or hold any part of the share capital of any other company, or companies, in aggregate value in excess of 25 per cent. of its paid-up capital and reserves of the bank.

For this reason this does not apply to the acquisition of other banks, hence, Hongkong Bank's purchase of Marine Midland.

This dispensation has also shown the Hongkong Bank to

T. F. & J. H. BRAIME (HOLDINGS) LIMITED

(Sheet Metal Pressings, Oilcan and Elevator Buckets)

TURNOVER UP BY 34%

The T. F. & J. H. Braime (Holdings) Ltd. was held in Leeds yesterday. The Chairman, Mr. H. H. Braime, M.A., presided and the following is his statement:

I am pleased to report a record Group turnover of £682,040, representing an increase of 34% on 1976. I estimate that approximately half this improvement could be the result of inflation but the remainder arises from increased production and reflects great credit on those concerned at every level.

The Group Trading Profit was £96,883 in which must be added the Investment Income of £18,496, making a total of £21,088 (1976—£267,700).

Last year I advised you that the Directors had taken note of the published proposals for Inflation Accounting. They are now considering the revised proposals with their professional advisers.

Shortly after the close of the Annual General Meeting it is my intention to resign my position as Executive Chairman and propose the election of my cousin, James Leigh Braime, currently Managing Director, to succeed me. I shall therewith terminate a happy association extending over 33 years and I am most grateful to my fellow Directors and a most loyal staff and work-force for the support they have given me throughout.

The Business is now in its ninetieth year of successful operation and I have every confidence in its future.

A final dividend on the Ordinary and "A" Ordinary Shares, as increased by the bonus issue of 8.31% (£23.75p per share) making 13.31% (£3.3275p per share) for the year was approved. (1976—11.91% or £3.029p per share after adjusting for bonus issue.)

Mr. J. A. H. Braime and Mr. O. N. A. Braime, the Directors retiring by rotation, were re-elected.

Montfort (KNITTING MILLS LIMITED)

Salient points from the Statement by the Chairman, Mr. M. I. Martin, and from the report and accounts for the year ended 31 December 1977.

● Group turnover showed a further increase of over 18% compared with the previous year.

● Overseas sales were 36% up and exports now account for over 15% of Group turnover.

● Progress is being made in improving performance of less profitable sections. A most encouraging feature was the turn-round in the Branded Sales Division to show a useful profit for 1977.

● Socks factories remained busy throughout, making their full contribution, and a higher profit from this Division seems assured for 1978.

● Provided there is no general downturn in trade, we are optimistic that the Group can maintain steady progress in the future.

Group Results	1977	1976
Group turnover	£29,210,722	£7,801,414
Exports	£1,434,703	£1,050,749
Profit before taxation	£318,160*	£323,512
Profit after taxation	£184,059*	£156,088
Dividends per share	3.490p	3.125p
Earnings per share	7.989p	6.752p

Swire Pacific move ahead

By ANTHONY ROWLEY

SWIRE PACIFIC, the diversified property, manufacturing and services group, has announced a 48 per cent. increase in after-tax profit for 1977, to SHK185m (S\$12.2m.) from Shk136m (S\$10.2m.) last year.

The increase, described as "significant" by the Swire Board, was ahead of analysis forecast, and Swire is proposing a one-for-ten scrip issue.

Final dividends of 21 cents per share, against 25 cents, and 44 cents per B share, against 44 cents per B share, are being recommended, making a total distribution for the year of 32 cents per A share and 44 cents per B share.

The directors say that "prospects for 1978 are encouraging" and they believe that dividends can be at least maintained on the capital increased by the scrip issue.

In addition to good results earlier from its subsidiary, Swire

Properties, part of whose shareholding, the entire

capital was floated to the public last year, Swire Pacific is believed to have benefited by good results from its airline subsidiary, Cathay Pacific.

Property purchase

Wah Kwong Properties is to buy a residential-commercial complex, Tsimshui Towers, for SHK36m (S\$21.5m.) from Swire Properties, the Swire group's property arm, writes Daniel Nelson from Hong Kong.

Windsor House

A SHK180m (S\$12.5m.) contract has been signed by Hong Kong Land Company and Gammon Building Construction for the superstructure of Windsor House, the 41-storey commercial building which Kong

Land is developing in Causeway Bay, Hong Kong.

Pan Electric reconstruction plan

By WONG SULONG

PAN ELECTRIC and General Industries, the Malaysian-based investment company, has announced a reconstruction scheme to separate its Malaysian and Singapore assets, to conform to the Government's new economic policy and to take advantage of the oil supply services available for Malaysian firms.

PEGI will acquire from Pan Electric 74 per cent. of the equity in Selco Malaysia, which is involved in providing tugs and barges for offshore oil operations. In turn, Selco Malaysia will team up with a Malaysian firm, to form Sernyi, which will provide tertiary services to the offshore oil industry. GII's main asset is its 45 per

All these securities have been sold. This announcement appears as a matter of record only.

REPORT TO INVESTORS from a company called TRW

TRW Reports Record 1977 Results.
Expects Continued Growth in 1978

FINANCIAL HIGHLIGHTS

(U.S. dollar amounts in millions except per share data)

	1977	1976
Sales	\$ 3,263.9	2,929.0
Pre-Tax Profit	292.3	240.3
Net Earnings	154.2	132.2
Earnings Per Share		
Fully Diluted	.421	.360
Primary	.477	.402
Dividends Per Common Share	1.35	1.35
Outstanding Common Stock	28,180,000	27,628,000
Shares Used in Computing Per Share Amount		
Fully Diluted	35,699,000	36,701,000
Primary	28,671,000	28,513,000

Restated to reflect adoption of U.S. Financial Accounting Standards Board Statement #13—Accounting for Leases.

TRW Inc. an international supplier of high-technology products and services, reports record sales, earnings and earnings per share for 1977.

Sales reached U.S. \$3.26 billion, an 11.4% increase compared with U.S. \$2.93 billion in 1976. Net earnings totaled U.S. \$154.2 million, 16.7% higher than the U.S. \$132.2 million (restated) reported in 1976. Fully-diluted earnings per share totaled U.S. \$4.21 versus U.S. \$3.60 (restated).

In 1976 while primary earnings per share were U.S. \$4.77 compared with U.S. \$4.02 (restated) last year. These are increases of 16.9% and 18.7% respectively.

Total cash dividends paid to common shareholders in 1977 amounted to U.S. \$1.55 per share, an increase of 14.8% over the U.S. \$1.35 per share paid in 1976.

Return on shareholders' investment improved to 17.5% in 1977 from 16.7% in 1976. Return on assets employed increased to 12.9% in 1977 from 11.9% in 1976. The company has among its goals a 20% return on shareholders' equity and a 15% return on assets employed.

Each of TRW's major business segments—car and truck, electronics and space systems, and industrial and energy—contributed to 1977's record results and are expected to show continued growth in 1978.

ARMING AND RAW MATERIALS

No change
in wool
market levy

By Our Commodities Staff

THE LEVY paid by the British Wool Marketing Board is to remain unchanged at 14.5d a kilo of 30s fine wool. The standstill notice the Government's recent decision that the guaranteed price for wool for 1978 should stay at the 1977 level—11d a kilo.

Announcing the new season's programme, Mr. Walter Elliot, chairman of the Board, said the Government's freeze on the guaranteed price was disappointing in view of farmers' increased costs.

Growers in the parts of the industry worst affected by recent cost increases would feel "doubly disappointed" as many would have to sell wool and almost certainly of lower quality to sell in the existing seasons.

The Board estimates U.K. wool production this year could be a kilo less than in 1977. At present prices this represents a loss to producers of £2m.

"Add to this the higher costs of shepherding, dipping, shearing, rent to mention some of the big items, and we felt that at least a modest increase in the guarantee could have been justified," Mr. Elliot commented.

Israeli farm exports rise

By Our Own Correspondent

TEL AVIV, April 17.—GRECO, an Israeli company trading in exports of unprocessed agricultural produce other than citrus, reports that its sales last month rose by 60 per cent. in March 1976 to reach \$23m. This main increase was in shipments of cut flowers and vegetables.

The aggregate value of shipments of autumn and winter produce (which started on October 1, 1977) was \$85m., up by 42 per cent. on the same period of 1976/77.

The company has now started exporting spring and summer crops which should do well in view of the hard winter and ring experience in many parts of Europe.

Brooke Bond's new tea brand

TOOKO BOND OXO yesterday launched a new low-priced packet tea called Orange Label. It is a green-blended dessert blend of quality tea at a down-the-earth price, and is expected retail for about 20p a quarter cup.

Index Limited 41,861,2466. Three month Copper 717.2-732.3. Lamont Road, London, SW10 0HS.

2. The commodity futures market for the smaller investor

Smelter closures cause copper price rise

BY OUR COMMODITIES STAFF

COPPER LED a general rise in prices on the London Metal Exchange yesterday, with cash wirebars ending the day 7.75 higher at £701.5 a tonne. The main factor behind the rise in copper values was the announcement by the Kennecott Refining Corporation and Anaconda of plant closures from May 1.

The Kennecott closure, at the Baltimore plant, is scheduled to last about three-and-a-half months and Anaconda's, at its Montana smelter, about two months.

Loss production at the two smelters is expected to amount to about 80,000 tonnes, but the moves should not interrupt supplies to customers. London trade sources said the net result should simply be a reduction in the "burdenous" oversupply situation.

Stocks held in London Metal Exchange warehouses fell by 9,625 tonnes last week—nearly twice the forecast level—but

the International Tin Council's decision, announced after hours last Friday, not to increase the buffer stock operating range had widely forecast and therefore had little effect on market sentiment.

The weakness of sterling also encouraged the rise in tin prices which lifted cash standard metal by £1.5 to £1,065 a tonne yesterday.

tin prices fall to 3,060 tonnes in LME stocks.

A further "bullish" factor quoted on the market yesterday was news that U.S. stockpile disposal legislation had been put aside until more pressing matters before the Senate armed services sub-committee have been dealt with.

Uncertainties over the future of the tin market were also partly due to the 5M6 per tonne price in the Malaysian price over the week-end and a further 295 tonnes fall to 3,060 tonnes in LME stocks.

Further "bullish" factor quoted on the market yesterday was news that U.S. stockpile disposal legislation had been put aside until more pressing matters before the Senate armed services sub-committee have been dealt with.

Uncertainties over the future of the tin market were also partly due to the 5M6 per tonne price in the Malaysian price over the week-end and a further 295 tonnes fall to 3,060 tonnes in LME stocks.
